## **Abstracts**

The global isostatic pressing market size reached US\$ 6.8 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 10.1 Billion by 2032, exhibiting a growth rate (CAGR) of 4.4% during 2024-2032.

Isostatic pressing (IP) refers to the process of forming powder metallurgy (PM) used for improving the porosity of metals. It includes hot and cold isostatic pressing (H/CIP) that involve the uniform application of pressurized water, oil or gas on powder compact to achieve consistent density and microstructure without geometrical limitations. Hot IP is used for merging titanium alloys and superalloys under high temperatures by solid-state diffusion. On the other hand, cold IP is used for compressing large-sized and complex components at ambient temperatures. These processes can also be used on ceramic balls, fuse and lighting tubes and spark plug insulators. As a result, IP processes find extensive applications across various industries, including automotive, aerospace, medical, energy and electronics.

### Isostatic Pressing Market Trends:

Significant growth in the aviation industry across the globe is one of the key factors creating a positive outlook for the market. IP is widely used for the manufacturing of defect-free components for tanks, artillery, military and private aircraft and spacecraft. HIP processes are also utilized for pressure-assisted brazing and fabrication of metal matrix composites. Moreover, the widespread adoption of additive manufacturing (AM) for combining ceramics and plastics is providing a thrust to the market growth. Additionally, the utilization of three-dimensional (3D) computer-aided design (CAD) modeling solutions is acting as another growth-inducing factor. CAD is widely used with metal injection molding (MIM), HIP and CIP processes for reducing porosity levels in 3D printing and enhancing flexibility and customizability. Other factors, including rapid industrialization, along with extensive research and development (R&D) activities in the field of precision manufacturing, are anticipated to drive the market toward growth.
