Abstracts

The 7 major Prinzmetal angina markets are expected to exhibit a CAGR of 3.8% during 2024-2034.

The Prinzmetal angina market has been comprehensively analyzed in IMARC's new report titled "Prinzmetal Angina Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Prinzmetal angina, also known as variant or vasospastic angina, refers to a form of chest pain or discomfort, which occurs due to a temporary narrowing of the coronary arteries. It is primarily caused by spasms or constrictions of the coronary arteries that can arise even when the person is at rest, making it distinct from other forms of angina. The symptoms of this condition are similar to those of classic angina and include chest pain or discomfort, often described as a tightness, pressure, or squeezing sensation in the chest. The pain typically occurs during rest or sleep and can be more severe. It often happens in episodes, and the pain can also radiate to the neck, jaw, shoulder, or arm. The diagnosis of Prinzmetal angina involves electrocardiograms (ECGs) during chest pain, which can show characteristic changes, such as transient ST-segment elevation. Coronary angiography may also be recommended to assess the condition of the coronary arteries and rule out various other underlying disorders.

The increasing incidences of endothelial dysfunction due to various risk factors, such as smoking, high cholesterol levels, elevated blood pressure, etc., resulting in abnormal responses to certain stimuli and narrowing of blood vessels, are primarily driving the Prinzmetal angina market. In addition to this, the inflating utilization of efficacious medications like calcium channel blockers, nitrates, nitroglycerin, etc., that are aimed at mitigating symptoms and averting further ischemic episodes is creating a positive

outlook for the market. Moreover, the widespread adoption of lifestyle adjustments and risk factor management strategies, due to their pivotal role in minimizing the frequency and intensity of vasospastic events, is also bolstering the market growth. Apart from this, the rising usage of cardiac rehabilitation programs, which help in enhancing cardiovascular resilience, optimizing exercise tolerance, and ameliorating overall cardiac function, is acting as another significant growth-inducing factor. Additionally, the emerging popularity of invasive procedures, such as coronary angiography, since they facilitate precise visualization and diagnosis of vasospasms in patients, is also augmenting the market growth. Furthermore, the escalating application of gene-based interventions, entailing the introduction of functional genetic material into cells to rectify or replace the aberrant genes responsible for the condition, is expected to drive the Prinzmetal angina market during the forecast period.

IMARC Group's new report provides an exhaustive analysis of the Prinzmetal angina market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for Prinzmetal angina and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the Prinzmetal angina market in any manner.
