## Abstracts

The global property management software market size reached US\$ 2.6 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 3.9 Billion by 2032, exhibiting a growth rate (CAGR) of 4.7% during 2024-2032.

Property management software (PMS) refers to an application-based solution used by property managers to automate back-office, financial and administrative operations. It performs various functions, such as financial reporting, generating electronic agreements, storing and sharing documents online and integrated banking. It also aids in minimizing the manual labor required for collecting rents and scheduling maintenance and repair activities and the tracking of tenants and leaseholders. This enables the managers, owners and operators to simplify and automate the tasks associated with managing the properties. Owing to this, it is widely used for handling residential and commercial properties.

### Property Management Software Market Trends:

Significant expansion in the real estate sector, along with increasing automation across industries, is one of the key factors creating a positive outlook for the property management software market. PMS offers a highly reliable, user-friendly and secure platform to the realtors that minimizes the risks of human error and enables the property managers to assign and delegate tasks effectively. Additionally, various technological advancements, such as integration with artificial intelligence (AI), machine learning (ML), virtual reality (VR) and cloud-computing solutions, are acting as other growth-inducing factors. These solutions provide a transparent and centralized platform for storing e-documents, maintaining tenant communications through messages and emails

and facilitating online rent payment. Other factors, including rising infrastructural developments and widespread adoption of software-as-a-service (SaaS)-based business models, along with increasing expenditure capacities of the consumers, are projected to drive the market further.

#### Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each segment of the global property management software market report, along with forecasts at the global, regional and country levels from 2024-2032. Our report has categorized the market based on component and application.

#### Breakup by Component:
