Abstracts

The global prostate cancer treatment market size reached US\$ 7.7 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 12.1 Billion by 2032, exhibiting a growth rate (CAGR) of 5.1% during 2024-2032.

Prostate cancer is a type of severe malignant tumor, which is caused by the uncontrollable division and expansion of various abnormal cells in the prostate gland present in men. It can be treated through the use of various therapeutics, such as vaccines, medications, and treatments. Amongst these, chemotherapy, immunotherapy, cryotherapy, surgery, hormonal, targeted and radiation therapy are some of the most common treatment types that aid in mitigating the spread of cancer cells in the body. These therapies are provided to the patient based on various assessments, such as the age of the patient, severity of the symptoms experienced, medical condition, and previous health history.

Prostate Cancer Treatment Market Trends:

The increasing prevalence of prostate cancer, especially amongst the rising geriatric population, is one of the prime factors currently driving the market toward growth. In line with this, the availability of favorable medical reimbursement policies and the numerous initiatives being undertaken by the government bodies of several countries for introducing patient assistance programs (PAPs) are acting as other growth-inducing factors. PAP is an organized program, which is controlled by pharmaceutical companies for providing financial assistance to patients by offering free medications for treatment

purposes. Moreover, significant technological advancements, such as the integration of multiparametric-magnetic resonance imaging (mp-MRI) devices with non-metastatic castration-resistant (nmCRPC) and metastatic hormone nave (mHNPC) settings for detecting prostate cancer at early stages, while mitigating diagnostic errors, is also contributing to the market growth. Additionally, extensive investments in the research and development (R&D) activities to introduce novel therapeutic products, along with their easy availability across various online and offline distribution channels, are creating a positive outlook for the market.

Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each sub-segment of the global prostate cancer treatment market report, along with forecasts at the global, regional and country level from 2024-2032. Our report has categorized the market based on drug type and distribution channel.
