Abstracts

The global psoriatic arthritis treatment market size reached US\$ 8.7 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 15.9 Billion by 2028, exhibiting a growth rate (CAGR) of 10.57% during 2022-2028.

Psoriatic arthritis is an autoimmune disorder wherein the immune system attacks the joints and causes inflammation. Its treatment options vary from oral medications that reduce swelling and inflammation to biological therapies that target the specific immune system. It is treated as per the level of pain, swelling, and stiffness. At present, key players are introducing new treatment methods that help prevent disease progression, reduce pain, protect joints, and preserve the range of motion. These methods can be combined with physical therapy to strengthen muscles and joints and increase overall stability.

Psoriatic Arthritis Treatment Market Trends:

Psoriasis disease is one of the major risk factors for psoriatic arthritis. As a result, the increasing prevalence of psoriasis disease due to infection, stress, obesity, skin injuries, alcohol abuse, and vitamin deficiencies represents one of the primary factors influencing the market positively. Moreover, as psoriatic arthritis occurs most commonly among individuals between the ages of 30 and 50, the rising adult population worldwide is contributing to the market growth. Apart from this, children with psoriatic arthritis are more likely to develop uveitis that affects the middle layer of tissue in the eyewall. This, in confluence with the growing concerns among parents about the health of their children, is catalyzing the demand for psoriatic arthritis treatment across the globe. In addition, the rising awareness about the benefits of early diagnosis and treatment of psoriatic arthritis, such as preventing serious damages, is bolstering the market growth.

Other factors, such as inflating disposable income of individuals, improvement in healthcare facilities, and the growing health awareness among individuals, are anticipated to drive the demand for novel psoriatic arthritis treatment to combat severe symptoms.
