## **Abstracts**

The 7 major pulmonary hypertension associated with interstitial lung disease markets reached a value of US\$ 1.1 Billion in 2023. Looking forward, IMARC Group expects the 7MM to reach US\$ 1.6 Billion by 2034, exhibiting a growth rate (CAGR) of 3.99% during 2024-2034.

The pulmonary hypertension associated with interstitial lung disease market has been comprehensively analyzed in IMARC's new report titled "Pulmonary Hypertension Associated with Interstitial Lung Disease Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Pulmonary hypertension associated with interstitial lung disease represents a complex and severe medical condition characterized by elevated blood pressure in the pulmonary arteries. It occurs when the lung tissue becomes progressively scarred and inflamed, leading to impaired gas exchange and reduced lung function. As a consequence, the heart must work harder to pump blood through the narrowed pulmonary vessels, resulting in increased pressure on the right side of the heart. The common symptoms of this condition may include breathlessness, fatigue, chest pain, dizziness, swollen ankles, etc. These indications tend to worsen over time, significantly impacting the patient's quality of life. The diagnosis of the ailment is often challenging, as the symptoms may be confused with those of other heart and lung diseases. Physicians typically rely on a combination of physical examination, medical history, and various investigations, including pulmonary function tests, high-resolution computed tomography, an echocardiogram, and right heart catheterization, to diagnose the disorder.

The increasing prevalence of frequent genetic and epigenetic alterations, which can cause scarred and thickened lung tissues, thereby inhibiting oxygen exchange and inducing hypertension in the pulmonary arteries, is primarily driving the pulmonary hypertension associated with interstitial lung disease market. In addition to this, the inflating utilization of effective therapeutic drugs, such as phosphodiesterase-5 inhibitors, endothelin receptor antagonists, prostacyclin analogs, etc., that are aimed at managing and decelerating disease progression, is also creating a positive outlook for the market. Moreover, the widespread adoption of oxygen therapy and pulmonary rehabilitation, owing to their numerous benefits, such as enhancing breathing function, physical stamina, and overall quality of life for individuals suffering from the ailment, is further bolstering the market growth. Apart from this, the rising application of advanced interventional procedures, such as balloon pulmonary angioplasty, that dilate narrowed or blocked pulmonary arteries in patients with end-stage disease is acting as another significant growth-inducing factor. Additionally, the emerging popularity of gene therapy, which focuses on delivering functional genetic material into cells to rectify or compensate for the aberrant or defective genes accountable for the illness, is expected to drive the pulmonary hypertension associated with interstitial lung disease market during the forecast period.

IMARC Group's new report provides an exhaustive analysis of the pulmonary hypertension associated with interstitial lung disease market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for pulmonary hypertension associated with interstitial lung disease and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the pulmonary hypertension associated with interstitial lung disease market in any manner.

#### Time Period of the Study

Base Year: 2023

Historical Period: 2018-2023

Market Forecast: 2024-2034

## Countries Covered

United States  
Germany  
France  
United Kingdom  
Italy  
Spain  
Japan

## Analysis Covered Across Each Country

Historical, current, and future epidemiology scenario  
Historical, current, and future performance of the pulmonary hypertension associated with interstitial lung disease market  
Historical, current, and future performance of various therapeutic categories in the market  
Sales of various drugs across the pulmonary hypertension associated with interstitial lung disease market  
Reimbursement scenario in the market  
In-market and pipeline drugs  
Competitive Landscape:  
This report also provides a detailed analysis of the current pulmonary hypertension associated with interstitial lung disease marketed drugs and late-stage pipeline drugs.

## In-Market Drugs

Drug Overview  
Mechanism of Action  
Regulatory Status  
Clinical Trial Results  
Drug Uptake and Market Performance

## Late-Stage Pipeline Drugs

Drug Overview  
Mechanism of Action  
Regulatory Status

## Clinical Trial Results

### Drug Uptake and Market Performance

\*Kindly note that the drugs in the above table only represent a partial list of marketed/pipeline drugs, and the complete list has been provided in the report.

### Key Questions Answered in this Report:

#### Market Insights

How has the pulmonary hypertension associated with interstitial lung disease market performed so far and how will it perform in the coming years?

What are the markets shares of various therapeutic segments in 2023 and how are they expected to perform till 2034?

What was the country-wise size of the pulmonary hypertension associated with interstitial lung disease market across the seven major markets in 2023 and what will it look like in 2034?

What is the growth rate of the pulmonary hypertension associated with interstitial lung disease market across the seven major markets and what will be the expected growth over the next ten years?

What are the key unmet needs in the market?

#### Epidemiology Insights

What is the number of prevalent cases (2018-2034) of pulmonary hypertension associated with interstitial lung disease across the seven major markets?

What is the number of prevalent cases (2018-2034) of pulmonary hypertension associated with interstitial lung disease by age across the seven major markets?

What is the number of prevalent cases (2018-2034) of pulmonary hypertension associated with interstitial lung disease by gender across the seven major markets?

How many patients are diagnosed (2018-2034) with pulmonary hypertension associated with interstitial lung disease across the seven major markets?

What is the size of the pulmonary hypertension associated with interstitial lung disease patient pool (2018-2023) across the seven major markets?

What would be the forecasted patient pool (2024-2034) across the seven major markets?

What are the key factors driving the epidemiological trend of pulmonary hypertension associated with interstitial lung disease?

What will be the growth rate of patients across the seven major markets?

## Pulmonary Hypertension Associated with Interstitial Lung Disease: Current Treatment Scenario, Marketed Drugs and Emerging Therapies

What are the current marketed drugs and what are their market performance?

What are the key pipeline drugs and how are they expected to perform in the coming years?

How safe are the current marketed drugs and what are their efficacies?

How safe are the late-stage pipeline drugs and what are their efficacies?

What are the current treatment guidelines for pulmonary hypertension associated with interstitial lung disease drugs across the seven major markets?

Who are the key companies in the market and what are their market shares?

What are the key mergers and acquisitions, licensing activities, collaborations, etc.

related to the pulmonary hypertension associated with interstitial lung disease market?

What are the key regulatory events related to the pulmonary hypertension associated with interstitial lung disease market?

What is the structure of clinical trial landscape by status related to the pulmonary hypertension associated with interstitial lung disease market?

What is the structure of clinical trial landscape by phase related to the pulmonary hypertension associated with interstitial lung disease market?

What is the structure of clinical trial landscape by route of administration related to the pulmonary hypertension associated with interstitial lung disease market?
