Abstracts

The global refurbished medical equipment market size reached US\$ 15.0 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 37.7 Billion by 2032, exhibiting a growth rate (CAGR) of 10.5% during 2024-2032.

Refurbished medical equipment refers to devices that have been restored to a reusable condition without changing their original specifications. The process of refurbishment involves the uninstallation of an old machine and a thorough servicing of all parts, followed by disinfecting, cleaning, painting and replacement of damaged or old components. The device is then sold at a considerably lower price in comparison to a new machine. Owing to these benefits, refurbished equipment finds extensive applicability across hospitals, clinics and other healthcare institutions.

The increasing privatization of the healthcare sector, along with the growing requirement for low-cost medical services, is one of the key factors driving the market growth. Furthermore, factors such as the increasing prevalence of chronic diseases and rising geriatric population are also providing a boost to the market growth. Healthcare centers are increasingly opting for alternatives to procure inexpensive medical

equipment to offer a wide variety of affordable treatment services to their patients without compromising on the quality. Additionally, the expanding population base suffering from critical ailments across the globe, such as cancer and cardiovascular diseases (CVDs) is also augmenting the market growth. Also, there is widespread adoption of refurbished equipment by private hospitals in the emerging nations owing to budget constraints. Moreover, the integration of devices with the Internet of Things (IoT) and extensive efforts by both government and non-governmental organizations (NGO) to make quality healthcare facilities accessible to all, are also projected to drive the market further.
