## **Abstracts**

The global rehabilitation equipment market size reached US\$ 14.3 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 23.1 Billion by 2032, exhibiting a growth rate (CAGR) of 5.4% during 2024-2032.

Rehabilitation refers to a set of interventions designed for optimizing or restoring human abilities through a series of training, therapies, and medications. Some of the commonly used rehabilitation equipment include mobility, walking assist, body support, therapy, and continuous passive motion (CPM) devices. These solutions are deployed to help in preventing secondary disabilities, enhancing range of motion, strengthening muscles, and improving strength, coordination, and endurance. This, in turn, assists in eliminating the risk of mental and physical complications, on account of which it is extensively used in physiotherapy and occupational therapy procedures.

### **Rehabilitation Equipment Market Trends:**

The increasing prevalence of various chronic and non-communicable diseases, such as cancer, arthritis, and Parkinson's, especially amongst the rising geriatric population, is currently facilitating the extensive utilization of rehabilitation equipment across clinics, hospitals, home care settings, and rehabilitation and physiotherapy centers. In line with this, the sudden outbreak of coronavirus disease (COVID-19) pandemic and the

consequent implementation of lockdowns has led to the deployment of virtual or remote healthcare programs on various online platforms. This trend, in turn, has enabled patients to receive personalized training medications and share the diagnostics record with rehab professionals, which is acting as another major growth-inducing factor. Moreover, in order to meet the escalating demand for better equipment and clinical outcomes, key players are significantly collaborating with other companies to launch cost-effective, durable, and high-performance rehabilitation equipment, which is contributing to the market growth. Other factors, including increasing investments in research and development (R&D) activities, rising consumer healthcare expenditure, and the numerous favorable initiatives undertaken by the governments and non-government organizations (NGOs) of various countries for strengthening the existing healthcare infrastructure, are creating a positive outlook for the market.

#### Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each sub-segment of the global rehabilitation equipment market report, along with forecasts at the global, regional and country levels from 2024-2032. Our report has categorized the market based on product type, application, and end use.
