Market Overview:

The global respiratory care devices market size reached US\$ 20.2 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 32.9 Billion by 2028, exhibiting a growth rate (CAGR) of 8.35% during 2023-2028.

Respiratory care devices refer to the medical equipment used for the diagnosis, treatment, assessment and care of patients suffering from pulmonary diseases. Nebulizers, inhalers, positive airway pressure (PAP) devices, spirometers, humidifiers, etc., are some of the most commonly used respiratory care devices. These devices primarily perform diagnostic, therapeutic and monitoring functions. They aid in ensuring a smooth respiration process by providing an adequate amount of oxygen to the lungs and preventing any blockage in the process.

The increasing prevalence of respiratory diseases, such as chronic obstructive pulmonary disease (COPD), asthma and tuberculosis, represent as the key factors driving the growth of the market. Sedentary lifestyles and stressful routines, in confluence with the growing number of smokers and rate of alcohol consumption, have resulted in rising incidences of lung cancer and other severe respiratory conditions. Also, the increasing number of premature births, along with the growing geriatric population are also impacting the demand for respiratory care devices. Both premature newborns and elderly tend to have weak immune systems and require various breathing support devices for facilitating artificial breathing and preventing respiratory disorders, including newborn respiratory distress syndrome (RDS). Other factors, such as the increasing healthcare expenditure and the development of miniature devices are

projected to drive the market further. Significant efforts by both the government and non-governmental organizations (NGO) to make quality healthcare facilities accessible to all, along with developing new and improving the existing healthcare infrastructure are also creating a positive outlook for the market.
