## **Abstracts**

The 7 major retinitis pigmentosa markets reached a value of US\$ 9.0 Billion in 2023. Looking forward, IMARC Group expects the 7MM to reach US\$ 17.1 Billion by 2034, exhibiting a growth rate (CAGR) of 5.99% during 2024-2034.

The retinitis pigmentosa market has been comprehensively analyzed in IMARC's new report titled "Retinitis Pigmentosa Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Retinitis pigmentosa is a group of genetic eye disorders that primarily affect the retina, which is the light-sensitive tissue at the back of the eye. It typically causes progressive degeneration of the photoreceptor cells in the retina, leading to vision loss and, eventually, blindness. The disorder affects rods and cones, the two types of photoreceptor cells responsible for vision in low-light and bright-light conditions, respectively. The ailment typically causes night blindness, followed by tunnel vision and loss of central vision. Various other symptoms include difficulty distinguishing colors, glare sensitivity, and reduced visual acuity. As the disease progresses, it can lead to more severe visual impairment. The ailment is typically diagnosed through a comprehensive eye examination that comprises a visual acuity test, a visual field test, an electroretinogram (ERG), and genetic testing to identify any known mutations associated with the disease. During the examination, an eye care professional will evaluate the health of the retina and look for characteristic changes, such as the presence of pigmentation and the thinning of blood vessels. They may also perform additional tests to assess visual function, such as color vision testing and contrast sensitivity testing.

The rising cases of mutations in various genes that are involved in the function and maintenance of the retina are primarily driving the retinitis pigmentosa market.

Additionally, the increasing prevalence of several triggering factors, such as genetic predisposition, certain medical conditions like Usher syndrome, exposure to environmental toxins, etc., is also propelling the market growth. Besides this, the widespread adoption of antioxidant therapy that involves taking supplements, including vitamin C, vitamin E, coenzyme Q10, etc., to reduce the levels of oxidative stress in the retina is creating a positive outlook for the market. Moreover, the emerging popularity of retinal prostheses, which use electrical stimulation to activate the remaining cells in the retina, allowing patients to distinguish between light and dark, is acting as another significant growth-inducing factor. Apart from this, the rising usage of fundus photography in diagnosing the ailment by detecting changes in the appearance of the retina, such as the presence of bone spicules, is also augmenting the market growth. Furthermore, the escalating demand for RNA therapy to slow or halt the progression of the condition, as well as improve visual function and quality of life for affected individuals, is expected to drive the retinitis pigmentosa market during the forecast period.

IMARC Group's new report provides an exhaustive analysis of the retinitis pigmentosa market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for retinitis pigmentosa and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the retinitis pigmentosa market in any manner.
