Abstracts

The Saudi Arabia camel dairy market size reached US\$ 256.0 Million in 2022. Looking forward, IMARC Group expects the market to reach US\$ 353.0 Million by 2028, exhibiting a growth rate (CAGR) of 5.3% during 2023-2028.

Camel milk is a rich source of magnesium, iron, sodium, potassium, copper, manganese and vitamins A and C. It comprises immunity-boosting antibodies like potent immunoglobulins, which help minimize the risk of developing autoimmune diseases. Its popular products include fresh and flavored milk, laban, cheese, yogurt, ice cream, infant formulae, and milk powder. At present, it is gaining immense popularity, especially among health-conscious and lactose-intolerant individuals, on account of high nutritional value with lower concentrations of saturated fats.

The camel dairy market is primarily driven by the considerable presence of camels in Saudi Arabia. Moreover, the increasing diabetic population, rising export market and numerous product launches are other significant factors contributing to the market growth. Camel milk can be consumed as a complete meal since it comprises all significant nutrients to sustain an individual throughout the day. Additionally, camel milk is a natural probiotic which promotes healthy bacterial growth, thereby aiding digestion. This, coupled with the presence of lactoferrin, which assists in protecting the body from viral, is positively influencing the sales of camel dairy products across the country. However, operations at the manufacturing units of various camel dairy market players have been severely disrupted due to the ongoing coronavirus disease (COVID-19) and the subsequent imposition of lockdown restrictions. The sales of camel dairy products are anticipated to increase in Saudi Arabia after lockdown restrictions are relaxed.
