## Abstracts

The 7 major schizoaffective disorder markets are expected to exhibit a CAGR of 2.21% during 2024-2034.

The schizoaffective disorder market has been comprehensively analyzed in IMARC's new report titled "Schizoaffective Disorder Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Schizoaffective disorder refers to a chronic mental health illness characterized by a combination of symptoms of schizophrenia and mood conditions, such as bipolar or major depressive diseases. It is considered a complex and relatively rare psychiatric ailment that affects a person's thoughts, emotions, and behavior. People suffering from this condition generally experience indications of schizophrenia, including hallucinations, delusions (holding false beliefs), disorganized thinking and speech, impaired social functioning, etc. These symptoms are often accompanied by periods of significant mood disturbance, such as elevated or low mood, increased energy, depression, persistent sadness, loss of interest or pleasure in activities, etc. The diagnosis of this ailment is mainly based on a comprehensive clinical interview to gather information about the patient's indications, medical history, and family history of mental health conditions. A healthcare professional will further assess the underlying symptoms against the diagnostic criteria guided by the Diagnostic and Statistical Manual of Mental Disorders (DSM-5) to validate a diagnosis. Various other diagnostic tests, like blood workup, toxicology screening, urine analysis, etc., are also utilized to support the diagnosis of the disease.

The rising cases of brain abnormalities causing structural and functional defects in certain neurological regions, such as the prefrontal cortex, hippocampus, basal ganglia, etc., are primarily driving the schizoaffective disorder market. In addition to this, the

increasing prevalence of genetic variations that may affect the balance of neurotransmitters responsible for the regulation of mood and perception is also propelling the market growth. Furthermore, the widespread adoption of effective drugs, including antipsychotics, selective serotonin reuptake inhibitors, benzodiazepines, etc., to manage the symptoms of the disease is creating a positive outlook for the market. Apart from this, the emerging popularity of cognitive behavioral therapy, which works by identifying and changing negative thought patterns and emotions in patients to develop coping skills, alleviate stress, and improve overall functioning, is also acting as another significant growth-inducing factor. Moreover, the inflating application of mindfulness-based interventions on account of their several benefits, like enhancing self-awareness, increasing acceptance of internal experiences, and boosting emotional regulation, is expected to drive the schizoaffective disorder market in the coming years.

IMARC Group's new report provides an exhaustive analysis of the schizoaffective disorder market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for schizoaffective disorder and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the schizoaffective disorder market in any manner.
