## Abstracts

The 7 major schizophrenia markets reached a value of US\$ 9,480.4 Million in 2023. Looking forward, IMARC Group expects the 7MM to reach US\$ 15,236.9 Million by 2034, exhibiting a growth rate (CAGR) of 4.4% during 2024-2034.

The schizophrenia market has been comprehensively analyzed in IMARC's new report titled "Schizophrenia Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Schizophrenia is a complex, chronic mental health disorder that often develops in late adolescence or early childhood and is characterized by disruptions in perceptions, thought processes, emotional responsiveness, and social interactions. The early onset of the disease, along with its chronic course, make it a disabling condition for several patients and their families. Schizophrenia patients usually tend to suffer from an array of symptoms, including hallucinations, delusions, disorganized speech or behavior, and impaired cognitive ability. Other symptoms tend to comprise trouble with concentration and movement-related disorders, among others. Schizophrenia patients are usually advised to undergo a psychological evaluation and a complete medical exam. Delusions or hallucinations alone can often be enough to lead to a diagnosis of schizophrenia. Additionally, a urine or blood test can be performed to eliminate alcohol or drug abuse as the cause of the symptoms. Besides this, magnetic resonance imaging (MRI) or computed tomography (CT) can also be used to eradicate the possibility of a brain tumor. An early diagnosis greatly improves a person's chances of recovering from the illness, reducing episodes of psychosis, and coping with psychotic experiences.

The rising incidences of mental illnesses owing to genetic dispositions, specific chemical imbalances in the brain, substance abuse, and psychosocial variables are

primarily driving the global schizophrenia market. In addition to this, the growing investments in digital and telecommunication solutions by government bodies and NGOs to promote self-care and mental health awareness are further bolstering the market growth. Moreover, the emerging popularity of injectable-based schizophrenia medications, particularly long-acting injectables owing to their associated benefits, such as effective long-term relapse prevention, increased patient compliance, ease of administration, and fewer adverse effects as compared to oral treatments is also creating a positive outlook for the market. Besides this, several key players are making significant investments in developing second-generation antipsychotics, such as serotonin and histamine, to prevent amphetamine-induced behavioral changes in patients. This, in turn, is acting as another growth-inducing factor. Additionally, the escalating utilization of high-content single-cell screenings to develop efficacious compounds for new schizophrenia drugs is further augmenting the market growth. They are cost-effective and time-saving alternative for introducing innovative drugs that can be supplied to small-scale clinics and other healthcare providers using this treatment repurposing strategy. Apart from this, the inflating demand for novel drugs with increased efficacy that do not have any adverse reactions on the patient's safety and well-being is expected to drive the schizophrenia market in the coming years.

IMARC Group's new report provides an exhaustive analysis of the schizophrenia market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for schizophrenia and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the schizophrenia market in any manner.
