Abstracts

The global self-service BI market size reached US\$ 7.8 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 18.0 Billion by 2028, exhibiting a growth rate (CAGR) of 14.96% during 2022-2028.

Self-service business intelligence (BI) is a data analytics approach enabling business operators from non-analytical background to access and explore data sets. It allows them to sort, filter, analyze and visualize data without the requirement of the information technology (IT) team. Besides this, it helps businesses promote collaboration on multiple divisions and utilize ad hoc querying. As it also assists in making informed decisions that lead to positive business outcomes, which include improving efficiency, better customer satisfaction, and higher revenue and profits. Consequently, there is a rise in the utilization of self-service BI in different fields, such as sales, finance, operations, marketing, and human resources.

Self-Service BI Market Trends:

There is a surge in the volume of structured and unstructured data across the globe, which can be accredited to globalization, increasing internet penetration, rising utilization of social media platforms and the burgeoning e-commerce sector. This, in confluence with the growing adoption of data analytics solutions by small and medium-sized enterprises (SMEs), represents one of the key factors positively influencing the adoption of service-service BI. It aids businesses in decentralizing the business analytical process. Moreover, the increasing emergence of cloud computing technologies in BI is offering lucrative growth opportunities to market players. Apart from this, as governing agencies of numerous countries are encouraging the utilization of digital payments, there is a considerable rise in the number of individuals shifting towards online payments. As a result, financial institutes like banks are seeking

technological solutions to make their existing workforce more efficient. This, along with the growing need for organizations to be more agile and retain a competitive edge in the market, are positively influencing the utilization of self-service BI around the world.
