Abstracts

The global self-service technology market size reached US\$ 38.4 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 69.6 Billion by 2032, exhibiting a growth rate (CAGR) of 6.6% during 2024-2032. The market is driven by increasing consumer preference for convenience, growing demand for contactless solutions, rapid technological advancements, cost efficiency for businesses, enhanced data collection capabilities, and a focus on environmental sustainability, resulting in widespread adoption across various industries, including retail, banking, healthcare, hospitality, and transportation.

Self-Service Technology Market Analysis:

Major Market Drivers: Self-service technologies are becoming popular as consumers are more interested in speedy and convenient solutions. These technologies offer rapid and effective service experiences in several industries. Furthermore, companies and customers are finding these solutions more attractive due to the rapid improvements in technology which have improved the usefulness and dependability of these solutions.

Key Market Trends: The main trends include the extensive use of interactive kiosks and self-checkout systems in the retail industry to better customer experience and speed up operations. Moreover, its adoption in public areas and commercial settings is also being supported by a rising need for hygienic and easy-to-use solutions. In addition, a number of businesses are emphasizing

innovation and strategic alliances to launch cutting-edge self-service systems that combine blockchain, artificial intelligence (AI), and biometric verification.

Geographical Trends: Asia Pacific is the largest regional segment, driven by rapid urbanization, technological adoption, and significant investments in self-service solutions across retail, banking, and transportation sectors. Other regions are also showing strong growth owing to high consumer demand for convenience and the early adoption of advanced technologies in various industries.

Competitive Landscape: Some of the major market players in the self-service technology industry include AZKOYEN SA, Crane Co., Diebold Nixdorf Incorporated, Fujitsu Limited, GRGBanking, HESS Cash Systems GmbH, HYOSUNG TNS Inc. (Hyosung Corporation), KIOSK Information Systems Inc., NCR Corporation, and Toshiba Corporation among many others.

Challenges and Opportunities: Concerns about data security and privacy present serious challenges in this industry as companies need to take strict precautions to safeguard client information and uphold confidence. However, opportunities lie in continuous innovation and expansion into emerging markets, where the demand for automated and contactless services is rapidly increasing.

Self-Service Technology Market Trends:

Increasing Consumer Preference for Convenience and Speed

Consumers are giving more importance to convenience and speed in service delivery, which is increasingly driving the demand for self-service technologies. There has been a hike in the fast-paced lifestyle which is prompting consumers to look for solutions that give quick and hassle-free services. About half of Americans (52%) are usually trying to do two or more things at once. 60% of these adults said they at least sometimes felt too busy, and 12% feel this way all or most of the time. Self-checkout kiosks, automated teller machines (ATMs), and digital information kiosks are technologies that serve this lifestyle by making sure that consumers are performing tasks independently and efficiently. Likewise, consumers appreciate the ability to control their transactions and interactions, which helps in minimizing wait times and reduce their dependency on human assistance. This is particularly visible in retail environments, where self-checkout

systems have become increasingly popular.

Enhanced Customer Experience and Engagement

The use of self-service technologies is known to improve customer experience and engagement. These technologies give consumers control over their interactions, leading to a more satisfying and personalized service experience. Interactive kiosks and mobile apps provide customers with easy access to information and services. This convenience is especially helpful in places like airports, retail establishments, and healthcare institutions where prompt and effective service is crucial. According to an industry survey, 30% of customers in quick-service restaurants (QSRs) would rather place their orders through a kiosk than a cashier if the wait times were the same. Also, 49.4% of retail consumers choose self-service checkouts because they believe it to be a quicker experience. Furthermore, 65% of customers in this survey believed that contactless payment methods are in line with their primary goals for security and hygiene.

Growing Technology Adoption in Various Industries

Self-service solutions are becoming more and more popular in the retail, banking, healthcare, hotel, and transportation industries as a way to boost productivity, cut expenses, and enhance customer happiness. ATMs, interactive teller machines (ITMs), and mobile banking applications are being used by the banking industry to save operating costs, provide 24/7 service, and give consumers a convenient and safe banking experience. Additionally, the reliability and trustworthiness of these technologies have increased with the implementation of cutting-edge security features like biometric authentication. In India, the fiscal year 2024 witnessed a notable 5.51 percent increase in the monthly average cash withdrawals from ATMs, reaching Rs 1.43 crore. In the healthcare industry, self-service kiosks and patient portals are also improving patient registration, check-in, and billing processes.

Self-Service Technology Market Segmentation:

IMARC Group provides an analysis of the key trends in each segment of the market, along with forecasts at the global, regional, and country levels for 2024-2032. Our report has categorized the market based on product and application.

Breakup by Product:

ATM

Kiosks

Vending Machines

ATM accounts for the majority of the market share

The report has provided a detailed breakup and analysis of the market based on the product. This includes ATM, kiosks, and vending machines. According to the report, ATM represented the largest segment.

According to the self-service technology market analysis and trends, automated teller machines (ATMs) accounted for the largest segment, due to their essential role in banking, providing 24/7 access to cash, facilitating quick and secure transactions, and supporting various financial services like deposits, transfers, and balance inquiries. In addition to this, the continuous advancements in security features and convenience, making them indispensable in urban and rural banking infrastructures across the globe, is providing a considerable boost to the self-service technology market share and revenue.

Breakup by Application:

Retail

QSR

Banking

Travel and Tourism

Healthcare

Others

Retail holds the largest share of the industry

A detailed breakup and analysis of the market based on the application have also been provided in the report. This includes retail, QSR, banking, travel and tourism, healthcare, and others. According to the report, retail accounted for the largest market share.

Based on the self-service technology industry forecast and outlook, the retail sector represented the largest segment. This is due to the extensive use of self-checkout systems, interactive kiosks, and digital payment solutions to enhance the shopping experience by reducing wait times, increasing efficiency, and providing personalized services. Moreover, retailers leverage these technologies to streamline operations, gather customer insights, and adapt to the growing consumer demand for convenience and speed. Besides this, the burgeoning integration of advanced technologies like artificial intelligence (AI) and the Internet of Things (IoT) in retail self-service solutions is enhancing the market growth.

Breakup by Region:

North America

United States

Canada

Asia Pacific

China

Japan

India

South Korea

Australia

Indonesia

Others

Europe

Germany

France

United Kingdom

Italy

Spain

Russia

Others

Latin America

Brazil

Mexico

Others

Middle East and Africa

Asia Pacific leads the market, accounting for the largest self-service technology market share

The report has also provided a comprehensive analysis of all the major regional markets, which include North America (the United States and Canada); Asia Pacific (China, Japan, India, South Korea, Australia, Indonesia, and others); Europe (Germany, France, the United Kingdom, Italy, Spain, Russia, and others); Latin America (Brazil, Mexico, and others); and the Middle East and Africa. According to the report, Asia Pacific represents the largest regional market for self-service technology.

As per the self-service technology market report and overview, Asia Pacific accounted for the largest segment due to rapid urbanization, a burgeoning middle class, and

increasing technological adoption in countries like China, Japan, and India. Moreover, the growing investment in self-service solutions by the retail, banking, and transportation sectors to enhance customer experience and operational efficiency, is bolstering the self-service technology market growth. Additionally, the growing demand for contactless and automated services, driven by a tech-savvy population and supportive government initiatives, is propelling the market growth.

Competitive Landscape:

The market research report has also provided a comprehensive analysis of the competitive landscape in the market. Detailed profiles of all major companies have also been provided. Some of the major market players in the self-service technology industry include AZKOYEN SA, Crane Co., Diebold Nixdorf Incorporated, Fujitsu Limited, GRGBanking, HESS Cash Systems GmbH, HYOSUNG TNS Inc. (Hyosung Corporation), KIOSK Information Systems Inc., NCR Corporation, Toshiba Corporation, etc.

(Please note that this is only a partial list of the key players, and the complete list is provided in the report.)

The top self-service technology companies are focusing on innovation, strategic partnerships, and expansion to strengthen their market positions. They are investing in research and development (R&D) to introduce advanced and artificial intelligence (AI)-powered self-service solutions that offer enhanced security and personalized user experiences. Moreover, many players are partnering with tech firms and financial institutions to integrate cutting-edge technologies like biometric authentication and blockchain. Furthermore, these companies are expanding their global footprint by entering emerging markets in Asia Pacific and Latin America, where demand for automated and contactless solutions is rapidly increasing, which is indirectly enhancing the self-service technology market's recent opportunities and developments.

Self-Service Technology Market News:

In August 2023, NCR Corporation announced that \$6.6 billion-asset First Bank has joined NCR's Allpoint Network. This merger will allow customers to easily access and deposit cash at trusted retail locations across the U.S. NCR also

enabled First Bank to transform its branches through the addition of almost 200 NCR Interactive Teller Machines (ITMs), bringing more self-service options to First Bank customers.

In January 2024, Diebold Nixdorf launched its new AI-based checkout solutions to combat shrink in retail. It is designed to prevent common sources of loss at self-service and traditional POS checkouts. The new smart vision technology-powered offering will complement Diebold Nixdorf's already-live AI-based solutions, which reduce friction during fresh produce scanning and age verification for restricted sales.

Key Questions Answered in This Report

1. How big is the global self-service technology market?
2. What is the expected growth rate of the global self-service technology market during 2024-2032?
3. What are the key factors driving the global self-service technology market?
4. What has been the impact of COVID-19 on the global self-service technology market?
5. What is the breakup of the global self-service technology market based on the product?
6. What is the breakup of the global self-service technology market based on the application?
7. What are the key regions in the global self-service technology market?
8. Who are the key players/companies in the global self-service technology market?
