The global sleep apnea devices market size reached US\$ 8.0 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 13.8 Billion by 2032, exhibiting a growth rate (CAGR) of 6% during 2024-2032.

Sleep apnea, or sleep-disordered breathing (SDB), is an acute medical condition in which oxygen supply to the brain is obstructed during sleep. It is caused by blockages in the airway resulting in irregular breathing patterns and loud snoring, with the individual often gasping for breath. Sleep apnea diagnostic and therapeutic devices, such as Continuous Positive Airway Pressure (CPAP), Bilevel Positive Airway Pressure (BiPAP) and Variable Positive Airway Pressure (VPAP) machines, are used to evaluate the patient's respiratory and other bodily functions during sleep. Apart from this, numerous oral devices, including the Mandibular Advancement Device (MAD) and tongue retaining device, are also utilized to treat mild to moderate cases of sleep apnea.

The increasing prevalence of obstructive sleep apnea disorder (OSA), central sleep apnea and complex sleep apnea syndrome, are among the key factors driving the growth of the market. Such disorders are highly prevalent among the geriatric population and individuals suffering from other ailments, such as diabetes, hypertension and cardiovascular diseases (CVDs), which is facilitating product adoption across both the developed and emerging nations. Furthermore, product innovations, including Out-of-Center (OOC) testing devices that examine sleep patterns, cardiovascular, oximetry and respiratory parameters for the diagnosis of OSA is also acting as another major

growth-inducing factor. Other factors, including improving healthcare infrastructure and growing awareness regarding the prolonged effects of sleep apnea, along with the miniaturization and launch of affordable devices by various brands, are projected to drive the market further.
