## **Abstracts**

The global smart card IC market size reached US\$ 3.0 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 4.6 Billion by 2032, exhibiting a growth rate (CAGR) of 4.71% during 2024-2032. The increasing number of debit and credit card users, rising usage in small and medium-scale enterprises (SMEs), and the growing employment of IoT devices represent some of the key factors driving the market.

A smart card integrated circuit (IC), also known as a chip card, is embedded in a plastic card and serves as a service token for storing and transacting data between users. It is associated with value and information and stored and processed within memory and microprocessor card chip. It is commonly available in microcontroller and memory variants. Among these, the microcontroller smart card IC comprises a central processing unit (CPU), crystal oscillator, timers, watchdog, and analog input and output. It helps reduce the complexity, costs, size of circuits, and discrete components in embedded systems. On the other hand, the memory smart card IC is dependent on the card reader for their processing and suitable for uses wherein the card performs a fixed operation.

Smart Card IC Market Trends:

The increasing adoption of cashless transactions on account of rapid digitization, rising sales of smartphones and high-speed internet connectivity represents one of the key factors driving the demand for smart card IC around the world. Moreover, there is an increase in the number of debit and credit card users as they provide secured transactions and security. This, coupled with cashbacks and discount vouchers offered by banks of numerous countries to small and medium-sized merchants for encouraging digital transactions. In addition, the rising number of e-commerce websites and increasing preferences for online shopping is driving the adoption of smart card IC worldwide. Apart from this, the growing adoption of smart employee identification (ID) cards in small and medium-scale enterprises (SMEs) for securing access to physical facilities and computer systems and networks is influencing the market positively. Furthermore, the increasing use of contactless smart card IC for public transportation is contributing to the market growth. Besides this, the rising use of smart card IC in the healthcare industry to manage patient identity, provide practitioners and pharmacists secure access to their medical records and reduce fraud is strengthening the growth of the market. Additionally, the increasing use of smart card IC in eSIM or SIM for various internet of things (IoT) devices to authenticate user identity and store data is creating a positive outlook for the market.

#### Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each segment of the global smart card IC market report, along with forecasts at the global, regional and country level from 2024-2032. Our report has categorized the market based on type, interface, architecture type, application, and end use industry.

#### Type Insights:

Microcontroller

Memory

The report has provided a detailed breakup and analysis of the smart card IC market based on the type. This includes microcontroller and memory. According to the report, microcontroller represented the largest segment.

#### Interface Insights:

Contact

Contactless

Dual Interface

A detailed breakup and analysis of the smart card IC market based on the interface has also been provided in the report. This includes contact, contactless, and dual interface. According to the report, contactless accounted for the largest market share.

#### Architecture Type Insights:

16-Bit

32-Bit

Others

A detailed breakup and analysis of the smart card IC market based on the architecture type has also been provided in the report. This includes 16-bit, 32-bit, and others. According to the report, 16-bit accounted for the largest market share.

#### Application Insights:

USIM/eSIMs

ID Cards

Employee ID

Citizen ID

E-Passport

Driving License

Financial Cards

Credit Cards

Debit Cards

IoT Devices

A detailed breakup and analysis of the smart card IC market based on the application has also been provided in the report. This includes USIM/eSIMs, ID cards (employee ID, citizen ID, e-passport and driving license), financial cards (credit cards and debit cards), and IoT devices. According to the report, USIM/eSIMs accounted for the largest market share.

#### End Use Industry Insights:

E-Government

Telecommunication

Transportation

Payment and Banking

Others

A detailed breakup and analysis of the smart card IC market based on the end use industry has also been provided in the report. This includes e-government, telecommunication, transportation, payment and banking, and others. According to the report, telecommunication accounted for the largest market share.

#### Regional Insights:

North America

United States

Canada

Asia Pacific

China

Japan

India

South Korea

Australia

Indonesia

Others

Europe

Germany

France

United Kingdom

Italy

Spain

Russia

Others

Latin America

Brazil

Mexico

Others

Middle East and Africa

The report has also provided a comprehensive analysis of all the major regional markets that include North America (the United States and Canada), Asia Pacific (China, Japan, India, South Korea, Australia, Indonesia, and others), Europe (Germany, France, the United Kingdom, Italy, Spain, Russia, and others), Latin America (Brazil,

Mexico, and others), and the Middle East and Africa. According to the report, Asia Pacific was the largest market for smart card IC. Some of the factors driving the Asia Pacific smart card IC market included rapid digitization, emerging business models, and the integration of advanced technologies.

#### Competitive Landscape:

The report has also provided a comprehensive analysis of the competitive landscape in the global smart card IC market. Detailed profiles of all major companies have also been provided. Some of the companies covered include Analog Devices Inc, CardLogix Corporation, CEC Huada Electronic Design Co. Ltd., Eastcompeace Technology Co. Ltd., Imatric LLC, On Semiconductor Corporation, Shanghai Fudan Microelectronics Group Co. Ltd., SONY Group Corporation, STMicroelectronics N.V., Texas Instruments Incorporated, Toshiba Corporation, Watchdata Technologies Pte Ltd., etc. Kindly note that this only represents a partial list of companies, and the complete list has been provided in the report.

#### Key Questions Answered in This Report:

- How has the global smart card IC market performed so far and how will it perform in the coming years?
- What are the drivers, restraints, and opportunities in the global smart card IC market?
- What are the key regional markets?
- Which countries represent the most attractive smart card IC markets?
- What is the breakup of the market based on the type?
- What is the breakup of the market based on the interface?
- What is the breakup of the market based on the architecture type?
- What is the breakup of the market based on the application?
- What is the breakup of the market based on the end use industry?
- What is the competitive structure of the global smart card IC market?
- Who are the key players/companies in the global smart card IC market?
