Market Overview:

The global smoothies market size reached US\$ 15.7 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 21.1 Billion by 2028, exhibiting a growth rate (CAGR) of 4.7% during 2023-2028.

A smoothie refers to a thick beverage which is prepared by blending an assortment of fruits, vegetables and other ingredients including milk, seeds, yogurt, ice-cubes, sweeteners, and nutritional and herbal supplements. It is high in nutrients such as vitamins and fibers and can be easily prepared and stored for immediate or later consumption. With the rising trend of green smoothies, various consumers are incorporating green leafy vegetables, such as kale, spinach, lettuce and collard greens, into their smoothies to improve digestion, boost the immune system and minimize unhealthy food cravings.

With the improving economic conditions, malnourishment and nutritional deficiencies which earlier affected a large segment of the population have now been replaced with chronic diseases such as arthritis, stroke, obesity, diabetes, epilepsy and heart attacks, particularly in developed countries. For instance, according to the Centers for Disease Control and Prevention (CDC), chronic diseases are one of the leading health problems in the US. However, owing to rising health consciousness in confluence with the adoption of healthier lifestyles, consumers are altering their everyday diet. They are shifting from carbohydrate-laden food products toward healthy protein-enriched snacks and meals. In addition to this, they are consuming more functional foods and beverages like smoothies to meet their daily nutritional requirements. Apart from this, owing to hectic lifestyles and long working hours, a rise in the demand for on-the-go-meal options

has been observed which, in turn, is strengthening the industry growth.
