Abstracts

The global snow goggles market size reached US\$ 5.79 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 7.49 Billion by 2028, exhibiting a growth rate (CAGR) of 4.26% during 2023-2028. The increasing preference for outdoor activities, the launch of dual-lens design snow goggles, and the rising expenditure capacities of consumers represent some of the key factors driving the market.

Snow goggles refer to protective eyewear that is essential for winter sporting activities like snowboarding and skiing. They are commonly worn to maintain vision, to protect the eyes from environmental elements, such as ultraviolet (UV) rays, wind, and snow. They are manufactured using soft, flexible materials like nylon, rubber, and polyurethane (PU). Snow goggles consist of a frame clip, ventilation foam, an outer lens, an inner lens, foam padding, dividers, adjusters, and straps. These goggles offer a wider field of view and excellent peripheral vision and help increase contrast in low light to avoid bumps and other obstacles. Snow goggles protect skiers and snowboarders from the sun's brightness, snow ingress, wind, and cold breeze as they are equipped with double lenses, anti-fog coatings, and good venting facilities.

Snow Goggles Market Trends:

A growing preference for outdoor activities, including snow sports, especially among millennials across the globe, is one of the key factors creating a positive outlook for the market. In line with this, the rising health consciousness and the increasing awareness regarding mental and physical benefits are favoring the market growth. Snow goggles

are widely used to seal the eyes and protect them from small particles and cold wind. Moreover, the widespread product adoption as a safety gear for snow activities is acting as another growth-inducing factor. Apart from this, the introduction of flax or carbon graphene snow goggles, as they are lighter, sportier, and stronger, is providing an impetus to the market growth. Additionally, the key players are focusing on improving the quality, quantity, and technology of manufacturing snow goggles and accessories for better visibility of the skier, which in turn is driving the market growth. Furthermore, the widespread product adoption due to the increasing engagement of consumers in outdoor activities, such as camping, skiing, surfing, snowboarding, and mountaineering is propelling the market growth. Along with this, the increasing product demand due to the rising inclination toward nature-based getaways is positively influencing the market growth. Besides this, the launch of dual-lens design snow goggles with an anti-fog feature that increases visibility is providing a considerable boost to the market growth. Other factors, including the increasing youth-centric programs and camps, rising expenditure capacities of consumers, easy product availability across e-commerce platforms, and introduction of frameless goggles with self-adjusting lenses, are supporting the market growth.
