## **Abstracts**

The global solid oxide fuel cell market size reached US\$ 1,118 Million in 2022. Looking forward, IMARC Group expects the market to reach US\$ 2,613 Million by 2028, exhibiting a growth rate (CAGR) of 15.2% during 2022-2028. Stringent environmental regulations, significant technological advancements in SOFCs, the trend towards decentralized power generation, the versatility and cogeneration potential of stationary SOFCs, and cost-efficiency in commercial applications are some of the major factors propelling the market.

The solid oxide fuel cell (SOFC) is an energy conversion device, presently revolutionizing the power industry. It uses solid oxide material as the electrolyte as it operates at high temperatures, typically between 800 to 1000 degrees Celsius. At these temperatures, oxygen ions can easily move from the cathode to the anode, combining with hydrogen to produce water, heat, and electricity. This fuel cell exhibits high efficiency and can utilize a broad spectrum of fuels, including hydrogen, natural gas, and biofuels. Besides this, the SOFC offers numerous environmental benefits, including low emissions and quiet operation, making it highly preferable for a wide range of applications, from small-scale power generation to larger power plants.

The global SOFC market is experiencing robust growth, driven by the implementation of increasingly stringent environmental regulations, necessitating a shift from traditional fossil fuels towards cleaner energy sources. Concurrent with this, significant technological advancements leading to improvements in the longevity and stability of SOFCs is bolstering their commercial viability. Moreover, there is a growing demand from various end-use sectors, particularly transportation and stationary power generation, which is propelling the market's expansion. In line with this, the ongoing

trend toward decentralization of power generation, particularly in developed economies, is aiding in market expansion. Additionally, surging energy security concerns stimulating investments in alternative energy technologies, including SOFCs, are contributing to the market's growth. Furthermore, numerous government initiatives and supportive policies providing incitement for the adoption of clean energy technologies are fueling the market growth. Besides this, the rising awareness about the implications of climate change and the advantage of renewable energy is influencing consumer behavior, thereby impelling the demand for SOFCs.

**Solid Oxide Fuel Cell Market Trends/Drivers:**

**Stringent environmental regulations**

Global initiatives, such as the Paris Agreement, have intensified the call for lower greenhouse gas emissions, leading governments to enforce stricter environmental regulations. Consequently, traditional, carbon-intensive energy generation methods are being phased out, triggering the shift towards cleaner alternatives. SOFCs, with their superior efficiency and low emissions, are gaining momentum in this changing landscape. Their high operating temperature enables the direct conversion of chemical energy to electricity, minimizing energy wastage and maximizing efficiency.

Significantly, SOFCs are not restricted to hydrogen fuel but can efficiently utilize a variety of fuels, including renewables, broadening their potential application, and further consolidating their environmental credentials. Apart from this, incentives, such as subsidies and tax credits, for green technologies have further catalyzed the adoption of SOFCs.

**Ongoing technological advancements and innovations**

Significant advancements in SOFC technology, such as breakthroughs in electrode materials and electrolyte designs improving the tolerance of SOFCs to fluctuating temperatures, reducing thermal stress, and improving overall durability, are propelling the market growth. In addition to this, system-level improvements have led to the creation of more compact and modular SOFC designs. These streamlined systems can be easily integrated into existing infrastructure, significantly broadening the range of potential applications. Moreover, ongoing innovation in the fuel flexibility of SOFCs is creating a favorable outlook for market growth. Additionally, consistent research breakthroughs aimed at reducing the operating temperatures of SOFCs are making these systems safer and more economical to maintain, which, in turn, is expanding their potential use cases are contributing to the market's growth.

**Expanding decentralization of power generation**

The trend towards decentralized power generation, largely driven by the growing desire for energy autonomy, improved grid resiliency, and more efficient energy utilization, is contributing to the market's growth. Besides this, SOFCs and their high efficiency and fuel flexibility make them an optimal solution for on-site power generation, especially in

areas where grid connectivity is challenging or unreliable. Their ability to provide consistent, uninterrupted power is particularly crucial for critical facilities like hospitals or data centers. Moreover, the cogeneration capabilities of SOFCs, generating both heat and power, provide another advantage. By harnessing the waste heat produced during the power generation process, they deliver improved overall energy utilization, contributing to more sustainable and cost-effective energy systems. Furthermore, the scalability of SOFC technology enables its deployment across a wide spectrum of applications, including individual residential units, industrial sites, and grid support systems.

#### Solid Oxide Fuel Cell Industry Segmentation:

IMARC Group provides an analysis of the key trends in each segment of the global solid oxide fuel cell market report, along with forecasts at the global, regional and country levels from 2023-2028. Our report has categorized the market based on application and end user.

#### Breakup by Application:

Portable

Stationary

Stationary dominates the market

The report has provided a detailed breakup and analysis of the market based on the application. This includes portable and stationary. According to the report, stationary represented the largest segment.

The demand for stationary SOFCs is being propelled by the unique combination of their adaptability and their potential for cogeneration. SOFCs can be deployed in diverse settings due to their scalability. This broad usability opens a wide range of potential markets for stationary SOFCs. Additionally, they offer the potential for cogeneration or combined heat and power (CHP), where the heat generated during electricity production is captured and used for heating purposes. This enhances overall energy utilization, leading to significant energy cost savings. Furthermore, growing urbanization and industrialization, particularly in developing countries, are spurring the need for reliable, efficient power solutions. In confluence with this, there's an emerging trend in smart grid technology, where SOFCs, as a part of distributed generation systems, can contribute to grid stability and reliability. This presents a lucrative landscape for stationary SOFCs, driving their demand upwards.

#### Breakup by End User:

Commercial

Data Centers

Military and Defense

Others

Commercial holds the largest share in the market

A detailed breakup and analysis of the market based on the end user has also been provided in the report. This includes commercial, data centers, military and defense, and others. According to the report, commercial accounted for the largest market share. The demand for SOFCs in commercial applications spurred by their cost-efficiency, resilience, and versatility represents one of the main factors impelling the market growth. Businesses are consistently seeking ways to reduce operating costs and enhance sustainability. SOFCs provide an excellent solution to these needs, offering high energy conversion efficiency, which significantly reduces energy costs. Their resilience to power disruptions, an increasing concern amidst climatic changes and grid vulnerabilities, ensures a reliable power supply for continuous business operations. SOFCs are also fuel agnostic, able to operate on a diverse array of fuel sources, allowing businesses to select the most cost-effective or readily available fuel. They also align with corporate sustainability goals, given their lower emissions profile compared to traditional energy sources. The commercial sector's growing emphasis on data centers and the electrification of various processes is creating remunerative opportunities for SOFCs. Furthermore, businesses appreciate the minimal noise and vibration from SOFCs, which can be critical for certain environments such as hospitals, data centers, and offices.

#### Breakup by Region:

- North America
  - United States
  - Canada
- Asia-Pacific
  - China
  - Japan
  - India
  - South Korea
  - Australia
  - Indonesia
  - Others
- Europe
  - Germany
  - France
  - United Kingdom
  - Italy
  - Spain
  - Russia
  - Others
- Latin America

Brazil

Mexico

Others

Middle East and Africa

North America exhibits a clear dominance, accounting for the largest solid oxide fuel cell market share

The report has also provided a comprehensive analysis of all the major regional markets, which include North America (the United States and Canada); Europe (Germany, France, the United Kingdom, Italy, Spain, Russia, and others); Asia Pacific (China, Japan, India, South Korea, Australia, Indonesia, and others); Latin America (Brazil, Mexico, and others); and the Middle East and Africa. According to the report, North America accounted for the largest market share.

The surging demand for SOFCs in North America is primarily driven by energy policies, regional resource availability, and the region's commitment to innovation and technological advancement. North America, with its abundant natural gas reserves, provides an ideal setting for the deployment of SOFCs, given their compatibility with this fuel type. Additionally, North America is a hub of technological innovation, with several key SOFC manufacturers based in the region, stimulating local demand. The region also hosts several initiatives supporting the research, development, and deployment of advanced energy technologies, including SOFCs. Federal and state-level policies, such as the investment tax credit (ITC) for fuel cells, serve as incentives for SOFC adoption. Moreover, the heightened focus on grid modernization and infrastructure resilience in North America is contributing to the market's growth.

**Competitive Landscape:**

The global SOFC market is marked by healthy competition, with a mix of established companies and emergent players vying for market share. Companies are investing heavily in research and development to enhance SOFC performance, efficiency, and durability. A key competitive factor lies in the ability to operate at lower temperatures, extending the lifespan of the fuel cell and expanding its application range.

Collaborations and partnerships are increasingly prevalent in the industry as companies seek to integrate complementary capabilities for market expansion. Additionally, market entrants are exploring niche applications for SOFCs, adding to the market's dynamism. The regulatory environment and government incentives further shape this competitive landscape, influencing both market entry and the pace of innovation.

The report has provided a comprehensive analysis of the competitive landscape in the market. Detailed profiles of all major companies have also been provided. Some of the key players in the market include:

Adaptive Energy LLC

Aisin Seiki Co. Ltd.

Bloom Energy  
Convion Ltd.  
Elcogen AS  
Fuji Electric Co. Ltd.  
Mitsubishi Heavy Industries Ltd.  
POSCO Energy  
SOLIDpower Group  
Sunfire GmbH  
Watt Fuel Cell Corporation.

#### Recent Developments:

In May 2023, Aisin Corporation announced the development of an ultrahigh-efficiency motor using NANOMET jointly with Tohoku Magnet Institute Co., Ltd.

In March 2023, Convion and Shell Global Solutions International announced their collaboration to develop, validate and commercialize advanced Solid Oxide Electrolysers (SOEC) supplied by Convion.

In Feb 2023, Bloom Energy launched its newest Combined Heat and Power Solution to further enhance the efficiency of its Bloom Energy Server™ to serve customers in markets facing growing energy demand but constrained power grids and ambitious climate goals.

#### Key Questions Answered in This Report

1. How big is the global solid oxide fuel cell market?
2. What is the expected growth rate of the global solid oxide fuel cell market during 2023-2028?
3. What are the key factors driving the global solid oxide fuel cell market?
4. What has been the impact of COVID-19 on the global solid oxide fuel cell market?
5. What is the breakup of the global solid oxide fuel cell market based on the application?
6. What is the breakup of the global solid oxide fuel cell market based on the end user?
7. What are the key regions in the global solid oxide fuel cell market?
8. Who are the key players/companies in the global solid oxide fuel cell market?

## Contents

### 1 PREFACE

### 2 SCOPE AND METHODOLOGY

- 2.1 Objectives of the Study
- 2.2 Stakeholders
- 2.3 Data Sources
  - 2.3.1 Primary Sources
  - 2.3.2 Secondary Sources
- 2.4 Market Estimation
  - 2.4.1 Bottom-Up Approach
  - 2.4.2 Top-Down Approach
- 2.5 Forecasting Methodology

### 3 EXECUTIVE SUMMARY

### 4 INTRODUCTION

- 4.1 Overview
- 4.2 Key Industry Trends

### 5 GLOBAL SOLID OXIDE FUEL CELL MARKET

- 5.1 Market Overview
- 5.2 Market Performance
- 5.3 Impact of COVID-19
- 5.4 Market Forecast

### 6 MARKET BREAKUP BY APPLICATION

- 6.1 Portable
  - 6.1.1 Market Trends
  - 6.1.2 Market Forecast
- 6.2 Stationary
  - 6.2.1 Market Trends

## 6.2.2 Market Forecast

# 7 MARKET BREAKUP BY END USER

## 7.1 Commercial

### 7.1.1 Market Trends

### 7.1.2 Market Forecast

## 7.2 Data Centers

### 7.2.1 Market Trends

### 7.2.2 Market Forecast

## 7.3 Military and Defense

### 7.3.1 Market Trends

### 7.3.2 Market Forecast

## 7.4 Others

### 7.4.1 Market Trends

### 7.4.2 Market Forecast

# 8 MARKET BREAKUP BY REGION

## 8.1 North America

### 8.1.1 United States

#### 8.1.1.1 Market Trends

#### 8.1.1.2 Market Forecast

### 8.1.2 Canada

#### 8.1.2.1 Market Trends
