Abstracts

The South Korea automotive airfilters market size reached USD 103.1 Million in 2025. Looking forward, IMARC Group expects the market to reach USD 141.2 Million by 2034, exhibiting a growth rate (CAGR) of 3.56% during 2026-2034. The growing number of automobile owners, the development of advanced engine technologies, and growing awareness among vehicle owners about the importance of regular maintenance of automotive airfilters represent some of the key factors driving the market.

Automotive air filters are essential components in vehicles that maintain the engine's health and performance. These filters are developed to clean the air that enters the engine, ensuring that only clean and contaminant-free air is used for combustion. They are produced of pleated paper or other materials that can capture dust, pollen, dirt, and other particles present in the air. They draw in air through the air filter into the engine's intake manifold. The filter traps these airborne particles, preventing them from entering the engine's combustion chambers. They can protect the engine from harmful contaminants and provide clean air, which is efficient combustion and allows the engine to burn fuel effectively, improving fuel efficiency and reducing emissions. Additionally, a clean air supply prolongs the life of the engine by preventing abrasive particles from causing premature wear and tear on critical components. It is recommended to replace or clean the air filter according to the manufacturer's guidelines to maintain optimal engine function.

SOUTH KOREA AUTOMOTIVE AIRFILTERS MARKET TRENDS:

The South Korea automotive air filter market is primarily driven by the increasing number of automobile owners in South Korea due to the well-developed automotive industry and the rising middle-class population with the purchasing power to buy cars. Moreover, several technological advancements and manufacturers have improved vehicle performance and efficiency through the development of advanced engine technologies that require more effective air, representing another major growth-inducing factor. Along with this, automotive air filter manufacturers in South Korea are providing high-quality filters that can handle the latest engine technologies, which is propelling the market growth. Besides this, the implementation of government regulations and policies regarding air quality and emissions standards is encouraging the adoption of automotive air filters, which is accelerating the market growth. Also, stricter regulations led automakers to incorporate advanced filtration systems, driving the demand for high-quality air filters. Apart from this, rapid urbanization led to increased traffic congestion in major cities, resulting in higher levels of airborne pollutants and contaminants. As a result, the need for reliable and efficient automotive air filters to ensure the quality of air inside the vehicle cabin is augmenting the market growth. Additionally, the growing awareness among vehicle owners about the importance of regular maintenance to extend the lifespan of their vehicles is creating a positive market outlook. Furthermore, changing the air filter is a simple and effective maintenance task that can improve engine performance and fuel efficiency, resulting in a growing number of airfilter replacements, creating a positive market outlook.
