Looking forward, IMARC Group expects the market to reach 270.9 Million Litres by 2034, exhibiting a growth rate (CAGR) of 1.41% during 2026-2034 . The growing use of maintenance contracts by commercial vehicle operators, increasing awareness about the importance of regular maintenance and lubrication to reduce downtime, and rising preferences for eco-friendly lubricants represent some of the key factors driving the market.

Commercial vehicle lubricants are specialized chemical formulations that are designed to reduce friction, heat, and wear between moving parts in commercial vehicles, such as trucks, buses, and delivery vans. They are formulated to meet strict environmental regulations and have lower emissions and reduced environmental impact. They act as a protective barrier, prevent metal-to-metal contact, minimize wear and tear, and enhance the lifespan and efficiency of the vehicle. They play a vital role in ensuring the smooth operation of engines, transmissions, and other components within commercial vehicles. They help regulate temperature by dissipating heat effectively, ensuring that the engine and transmission stay within optimal operating ranges. They can extend the time between scheduled maintenance and oil changes, increase productivity, and reduce maintenance costs of vehicles. They improve engine performance, reduce heat generation, and lower the risk of breakdowns and costly repairs. As they assist in enhancing overall vehicle safety, minimizing the chances of unexpected failures on the road, and improving the resale value of the vehicle, the demand for commercial vehicles lubricants is rising in South Korea.
