Abstracts

The global soy desserts market size reached US\$ 74.5 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 125.7 Billion by 2032, exhibiting a growth rate (CAGR) of 5.8% during 2024-2032. The increasing health consciousness, easy availability via online food delivery applications, and the growing popularity of soy desserts among fitness enthusiasts represent some of the key factors driving the market.

Soy is a high protein, plant-based food that aids in managing cholesterol levels, treating osteoporosis, improving bone health, and reducing the symptoms of developing diabetes and heart diseases. It is widely used in the preparation of various food products and drinks as it is rich in calcium, iron, magnesium, phosphorous, potassium, thiamin, and other essential nutrients. It is commonly available in the form of milk, oil, tofu, and whole variants. At present, soy finds extensive application in the preparation of desserts like ice cream, cake, pastries, pie, tarts, muffins, chocolate, candies, and cookies. Soy desserts are increasingly being served in cafes, restaurants, hotels, quick-service restaurants (QSRs), and other food outlets across the globe.

Soy Desserts Market Trends:

Presently, factors like rapid urbanization, increasing purchasing power, and the growing adoption of a nutritious diet are among the key factors driving the demand for soy desserts around the world. Moreover, the rising health consciousness among individuals and the growing awareness among the masses about the benefits of consuming soy desserts as compared to dairy-based dessert are currently influencing

the market positively. In addition, the increasing sales of soy desserts through various online food delivery applications on account of the easy availability, busy lifestyles, and doorstep delivery is contributing to the market growth. Apart from this, there is a rise in the prevalence of various medical disorders due to sedentary lifestyles and unhealthy dietary patterns. This, coupled with the surging prevalence of obesity and lifestyle and chronic diseases, is catalyzing the demand for soy-based food products and desserts worldwide. Furthermore, with the growing population of lactose-intolerant individuals and the increasing adoption of veganism, there is a rise in the demand for dairy-free products, such as soy-based food products like desserts. Besides this, the increasing number of people going to the gym, the rising adoption of protein-based diets, and the growing popularity of soy desserts among fitness enthusiasts for guilt free indulgence are some of the other factors creating a positive outlook for the market. Additionally, key players are financing advertising campaigns, such as celebrity endorsements and social media endorsements, for improving their existing sales and profitability.
