The global steel grating market size reached US\$ 202.1 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 264.6 Billion by 2028, exhibiting a growth rate (CAGR) of 4.3% during 2023-2028.

Steel gratings, also known as bar gratings, are open grid assemblies of metal bars that hold heavy loads with minimal weight. They offer durability, sustainability, high tensile strength, anti-deformation properties, ventilation and penetration of light, and ease of cleaning, fixation and dismantling. As a result, they are widely used in floors, mezzanines, stair treads, fencing, and maintenance platforms of factories, workshops, motor rooms, trolley channels, boilers, and heavy equipment areas. Besides this, they find extensive applications in residential and commercial spaces as steel gratings are available in powder-coated carbon, galvanized, and stainless steel around the world.

Steel Grating Market Trends:

There is currently a considerable rise in the employment of steel gratings in the construction of platforms, drainage and trench covers. This, along with rapid industrialization across the globe, represents one of the key factors driving the market. Moreover, governments of several countries, especially in developing economies, are extensively investing in infrastructure development, which is positively influencing the market. In addition, the increasing utilization of steel gratings in wastewater treatment plants to withstand corrosive and high-moisture environments is contributing to the growth of the market. Besides this, they are widely used in drilling platforms to explore offshore oil and natural gas resources due to their high bearing capacity and explosion-proof and non-slip properties. Additionally, a rising number of walkways for pedestrians, physically challenged and old age people, and children to walk freely and safely on roads and gardens is stimulating the market growth. Furthermore, key market players

are offering various customizations like accessories and fabrications of grating products to end users, which is projected to bolster the growth of the market.
