## Abstracts

The global surgical site infection control market reached a value of US\$ 4.20 Billion in 2021. Looking forward, IMARC Group expects the market to reach a value of US\$ 5.51 Billion by 2027, exhibiting a CAGR of 4.30% during 2022-2027. Keeping in mind the uncertainties of COVID-19, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

Surgical site infection (SSI) control refers to various practices or measures employed to prevent infections among patients during their stay at the hospital. These infections occur after surgery in the operated part of the body, leading to poor wound healing and extended overnight stays for the treatment. SSI control is essential as these infections can be severe and affect tissues, organs, or implants. Some commonly used SSI control products include surgical drapes, gloves, hair covers, disinfectants, skin preparation solutions, scrubs, and medical nonwovens. In recent years, SSI control solutions have gained traction across the healthcare sector as they help prevent infections, enhance patient care quality, and improve surgical outcomes and success rates.

**Surgical Site Infection Control Market Trends:**

SSI control products assist in reducing the duration of hospital stays, eliminating the need for revision surgeries, and minimizing patient discomfort. As a result, the rising cases of hospital-acquired infections represent the primary factor driving the market growth. Besides this, the growing awareness regarding SSIs and the shifting focus toward infection prevention through proper control measures are augmenting the product demand. Additionally, there has been a significant increase in the prevalence of

chronic conditions, such as cancer, gastrointestinal disorders, and cardiovascular diseases (CVDs), due to the aging population, sedentary lifestyles, and unhealthy eating habits. This, in confluence with the increasing number of patients undergoing surgical procedures, is accelerating the adoption of SSI control products. Furthermore, several favorable initiatives undertaken by the governing and non-governing agencies of various countries, such as the introduction of stringent guidelines and training programs focused on infection control practices, are catalyzing the market growth. Moreover, the rising integration of SSI control products with advanced technologies, improving healthcare infrastructure, and ongoing research and development (R&D) activities are some of the factors creating a positive market outlook.

#### Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each sub-segment of the global surgical site infection control market, along with forecasts at the global, regional and country level from 2022-2027. Our report has categorized the market based on product, infection type, surgery type and end user.

#### Breakup by Product:

- Antibiotic Prophylaxis Products
- Wound Care Dressings
- Surgical Drapes
- Surgical Clippers
- Antiseptics and Disinfectants
- Wound Irrigation Products
- Others

#### Breakup by Infection Type:

- Superficial Incisional SSI
- Deep Incisional SSI
- Organ or Space SSI

#### Breakup by Surgery Type:

- Cesarean Section
- Gastric Bypass
- Cataract Surgery
- Dental Restoration
