Abstracts

The 7 major swimmer's shoulder/impingement syndrome markets are expected to exhibit a CAGR of 5.7% during 2024-2034.

The swimmer's shoulder/impingement syndrome market has been comprehensively analyzed in IMARC's new report titled "Swimmer's Shoulder/Impingement Syndrome Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Swimmer's shoulder, also known as shoulder impingement, subacromial impingement, or painful arc, refers to a type of shoulder tendinitis characterized by the inflammation of tendons and tissues that connect muscles to bones. The tendons in the shoulder become inflamed and swollen due to the pressing of nearby bones, muscles, or other tendons. Repetitive use of the joint creates irritation, inflammation, tears, and scarring, which are the main causes of the disorder. Inflammation usually affects the tendons of the rotator cuff, which can pressure the acromion, the top part of the shoulder blade bone. Additionally, friction on the shoulder blade can cause bone growth in the body. One of the common symptoms includes sudden pain in the shoulder when the person lifts the arm overhead or backward and faces issues in moving the joint smoothly. Other symptoms are shoulder weakness and instability, mild but persistent arm discomfort, and muscular fatigue. The diagnosis of the ailment consists of a physical examination and a review of symptoms. Various shoulder areas are also pressed to check for pain, bruising, or soreness, along with the shoulder's range of motion and mobility. Further, imaging exams are used to detect severe bone or soft tissue injuries. X-ray checks for broken or dislocated bones, and a CT scan or MRI reveals tendon tears, which help to diagnose the condition and prescribe treatment and drugs.

The rising prevalence of sports-related shoulder injuries across all age groups owing to the growing health consciousness and the elevating importance of physical activities is primarily driving the swimmer's shoulder/impingement syndrome market. Numerous sports requiring high or vigorous shoulder motion, such as swimming, tennis, basketball, etc., increase the risk of developing this syndrome. In addition to this, the expanding geriatric population, who are more susceptible to injuries related to soft tissues owing to age-related degeneration, is further creating a positive outlook for the market. Moreover, the emerging popularity of the minimally invasive arthroscopic technique, commonly known as shoulder arthroscopy, which relies on very small incisions to preserve joint mobility and function, is also bolstering the market growth. Besides this, several key players are making significant investments in developing corticosteroid injections to lessen acute pain and improve shoulder mobility. This, in turn, is further acting as another growth-inducing factor. Additionally, the widespread adoption of suture anchor devices on account of their strength of fixation and the support they provide to the injury site, is expected to drive the swimmer's shoulder/impingement syndrome market in the coming years.

IMARC Group's new report provides an exhaustive analysis of the swimmer's shoulder/impingement syndrome market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for swimmer's shoulder/impingement syndrome and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the swimmer's shoulder/impingement syndrome market in any manner.
