The global AMC CPU cards market size reached US\$ 617.5 Million in 2023. Looking forward, IMARC Group expects the market to reach US\$ 1,100.7 Million by 2032, exhibiting a growth rate (CAGR) of 6.43% during 2024-2032. The increasing demand for high-performance computing, the widespread integration of various advanced technologies, such as AI, IoT, and ML, significant growth in the telecommunications industry, and enhanced focus on research and development (R&D) activities represent some of the key factors driving the market.

Advanced mezzanine card (AMC) central processing unit (CPU) cards are high-performance computing modules that are computer expansion cards used in telecommunications and other industries. AdvancedTCA and MicroTCA are some of the commonly used AMC CPU cards. They provide high-speed processing power and can be easily integrated into existing systems. AMC CPU cards are widely used in network processing and packet filtering, storage and data management, high-performance computing, image and video processing, and digital signal processing. They are cost-effective, scalable, interoperable, highly reliable, and resilient, ensuring that applications run smoothly and without interruption. As a result, AMC CPU cards are extensively used in communications and network infrastructure, healthcare, industrial automation and control, military and aerospace, and transportation (including infotainment

infrastructure).

AMC CPU Cards Market Trends:

The increasing demand for high-performance computing is one of the key factors creating a positive outlook for the market. AMC CPU cards are widely used to deliver enhanced processing capabilities due to the increasing data-intensive workloads and advanced algorithms. In line with this, the widespread product adoption due to the changing trend towards modular and scalable computing architectures is favoring the market growth. Moreover, the increasing need for AMC CPU cards in the telecommunications industry to offer high-performance computing, packet processing, and network functions virtualization (NFV) is propelling the market growth. Apart from this, the rising adoption of cloud computing is driving the demand for more powerful computing solutions that can support cloud-based applications and services, which in turn is positively influencing the market growth. Furthermore, the increasing demand for robust computing solutions due to the integration of various new technologies, such as artificial intelligence (AI), machine learning (ML), and the Internet of Things (IoT), is providing a thrust to the market growth. Besides this, the widespread product adoption in embedded systems, which are extensively used in a variety of applications, including industrial automation, medical devices, and automotive systems, is acting as another growth-inducing factor. Other factors, including increasing adoption of AdvancedTCA, enhanced focus on research and development (R&D) activities, and the launch of miniaturized AMC CPU cards, are supporting the market growth.
