Abstracts

The global tangential flow filtration market reached a value of US\$ 1.02 Billion in 2021. Looking forward, IMARC Group expects the market to reach US\$ 1.57 Billion by 2027, exhibiting a CAGR of 7.18% during 2022-2027. Keeping in mind the uncertainties of COVID-19, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

Tangential flow filtration (TFF) is a rapid, efficient, and scalable method of separating and purifying biomolecules. It can desalinate and concentrate proteins, peptides, and nucleic acids, remove polyvinyl alcohol (PVA) remains, and fractionate dilute protein mixtures. It is used in immunology, biochemistry, protein chemistry, molecular biology, and microbiology to recover bacterial cultures, viruses, and antibodies recombinant proteins from cell culture media. In addition, as it is economical and easy to use, it is widely utilized in harvesting cell suspensions and clarifying fermentation broths and cell lysates.

Tangential Flow Filtration Market Trends:

Biopharmaceuticals have few side effects, and they can be altered according to specific medical requirements of the patients compared to conventional drugs. This, in confluence with a significant rise in the demand for biopharmaceuticals on account of the emerging trend of personalized treatments, represents one of the key factors bolstering the market growth. This can also be attributed to the growing prevalence of acute and chronic diseases and easy access to medical facilities worldwide. Moreover, the growing geriatric population, in confluence with the increasing expenditure on healthcare infrastructure by governing agencies of numerous countries, is contributing

to market growth. Apart from this, automated single-use TFF systems are gaining immense traction across the globe as they increase flexibility and reduce process time, cross-contamination, cost, and cleaning requirements. Furthermore, the outbreak of coronavirus disease (COVID-19) and the urgent need to develop potential treatment are catalyzing the demand for TFF devices to collect environmental samples and fractionate virus particles. Besides this, a considerable rise in the number of research and development (R&D) activities to develop novel techniques is anticipated to provide lucrative opportunities to market players.
