### Market Overview:

The global telecom network management system market size reached US\$ 8.5 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 15.1 Billion by 2028, exhibiting a growth rate (CAGR) of 10% during 2023-2028.

Telecom network management system (NMS) refers to the tools, applications and services that are used for managing a telecommunication network. The telecom NMS ensures impeccable interactivity and transmission of information across heterogeneous operating systems and telecommunication networks. It also consists of management of network addresses, security, traffic, hardware, software, load balancing, data backup and recovery. This enables the users to manage individual components within a vast network and conduct performance analysis to avoid network disruptions, improve network security and ensure optimal performance. Owing to this, it finds extensive applications across various industries, including banking, financial services and insurance (BFSI), information technology (IT), manufacturing, retail, healthcare and transportation.

Significant growth in the telecommunications industry across the globe is one of the key factors driving the growth of the market. The increasing need for in-depth visibility in network infrastructure is also providing a boost to the market growth. Furthermore, widespread adoption of telecom NMS for maintaining Quality of Experience (QoE) and Quality of Service (QoS) for the optimization of business operations is contributing to the market growth. In addition to this, a substantial increase in the Internet Protocol (IP) and cloud traffic across the globe is acting as another growth-inducing factor. Service

vendors are developing cost-effective NMS tools that can be used for network function virtualization, fixed and mobile broadband networks and network orchestration. Other factors, including advancements in the 4G and 5G telecommunication infrastructure, and the integration of the existing networks with the Internet of Things (IoT), are projected to drive the market further.
