## **Abstracts**

The global text analytics market size reached US\$ 7.4 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 19.7 Billion by 2028, exhibiting a growth rate (CAGR) of 17.73% during 2022-2028.

Text analytics refers to the automated process of translating large volumes of unstructured text, such as emails, online reviews, tweets, call center agent notes, and survey results, into quantitative data to obtain insights about trends. It relies on text mining and natural language processing (NLP) algorithms to find meaning from written communication. It can be combined with data visualization tools to enable companies to understand numbers and make better decisions. At present, it is widely used by organizations across the globe to evaluate text in a wide range of languages and gain a deeper understanding of customer opinions.

### Text Analytics Market Trends:

Due to the outbreak of coronavirus disease (COVID-19), businesses around the world are focusing on boosting their overall sales by establishing their online presence. As a result, high amounts of unstructured data are generated every minute, which represents one of the key factors encouraging enterprises worldwide to integrate text analytics. Text analytics automatically analyze data from social media posts, emails, live chats and surveys and procure quantitative insights. It assists in identifying patterns, improving customer satisfaction, detecting product issues, conducting market research, and monitoring brand reputation. Moreover, as it is scalable, text analytics is being widely adopted by small and medium-sized enterprises (SMEs) to gain results in real-time, make confident decisions, and resolve customer issues on time. Apart from this, text analytics can also identify actionable insights by aggregating text analysis results and incorporating business intelligence (BI) tools for easy-to-understand reports and graphics. This is positively influencing its utilization in the media, retail, healthcare, travel and tourism, military and defense, information technology (IT) and telecommunication, and banking, financial services, and insurance (BFSI) sectors.
