Abstracts

The Thailand aquafeed market size reached 4,09,700 Tons in 2023. Looking forward, IMARC Group expects the market to reach 7,77,700 Tons by 2032, exhibiting a growth rate (CAGR) of 7.1% during 2024-2032.

Thailand has the most sophisticated commercial aquafeed manufacturing industry. It has one of the world's largest shrimp and fish production industries which play a significant role in the country's economy. Rising exports of fishery products across various countries have increased the demand of aquafeed in the country. Moreover, all the required raw materials are easily available in the country that helps in the rapid development and production of fish feed such as corn, soybean, fish meal etc. Apart from this, rising awareness among consumers about the high-protein content of seafood has encouraged the farmers to use improved aquafeed. Additionally, new technologies are being introduced in the country to improve the feed quality in order to attain higher productivity. In addition, due to drug and chemical residue problems, farmers who culture freshwater shrimp have started using more commercial feed instead of on-farm mixed feed.
