Abstracts

The UAE prefabricated building and structural steel market size reached US\$ 635.0 Million in 2023. Looking forward, IMARC Group expects the market to reach US\$ 1,003.9 Million by 2032, exhibiting a growth rate (CAGR) of 5.1% during 2024-2032.

Prefabricated buildings are made by assembling components, such as roofs, walls, and staircases, at off-sites by builders in specialized facilities. These structures are then installed at the site depending on the preference of an individual. Prefabricated buildings are supported by structural steel frames, which comprises angles, columns, and beams. They act as an ideal building solution in locations with unsuitable environmental conditions for onsite construction. Besides this, they are environment-friendly, require minimal maintenance, and provide better weather resistance, ease of expansion and efficient material utilization. As a result, they find extensive utilization in the construction of traditional structures in the residential and commercial sectors of the UAE.

UAE Prefabricated Building and Structural Steel Market Trends:

The growing adoption of advanced construction methods to reduce the time and the rising number of unskilled laborers represents one of the key factors positively influencing the sales of prefabricated building components and structural steel in the UAE. In addition, the usage of these solutions helps in decreasing construction debris and pollutants and minimizing human errors and the overall cost of the project. As prefabricated building components are manufactured using advanced technologies with controlled quality specifications, they assist in extending the average lifespan of

buildings. These benefits, along with the increasing preferences of contractors for off-site construction, are strengthening the growth of the market in the country. Apart from this, the UAE Government started numerous development programs, which is a long-term plan for the economic development of the emirate. This program is anticipated to escalate the demand for prefabricated building and structural steel in the construction of resilient infrastructure across the country.
