## Abstracts

The 7 major vascular tissue neoplasm markets are expected to exhibit a CAGR of 3.89% during 2024-2034.

The vascular tissue neoplasm market has been comprehensively analyzed in IMARC's new report titled "Vascular Tissue Neoplasm Market: Epidemiology, Industry Trends, Share, Size, Growth, Opportunity, and Forecast 2024-2034". Vascular tissue neoplasm refers to a tumor that originates from the body's vascular system, which includes the blood vessels (arteries, veins, and capillaries) and the lymphatic system. These tumors might be benign or malignant in nature. Benign neoplasms include hemangiomas, which are commonly found in the skin and are more prevalent in infants and young children. On the other hand, malignant vascular neoplasms, known as angiosarcomas, are aggressive cancers that can arise from blood vessel walls. These tumors are relatively rare but can occur in various body parts, such as the soft tissues, liver, or breast. Some common symptoms of the ailment include red or purple skin growths, pain, discomfort, ulceration, fatigue, visible mass or swelling, weakness, unexplained weight loss, etc. The diagnosis of this illness is mainly based on the patient's characteristics, findings, medical history, and physical exam. A healthcare provider may also perform angiography, that uses a dye to help in visualizing the blood vessels and identifying blood flow in the tumor. Furthermore, a biopsy may be conducted to evaluate and diagnose abnormalities in the tissue.

The increasing cases of genetic mutations or alterations that can lead to uncontrolled cell growth and division, resulting in the development of tumors, are primarily driving the vascular tissue neoplasm market. In addition to this, the rising incidences of immune system disorders, in which the body may not effectively recognize or eliminate

cancerous cells, are also creating a positive outlook for the market. Moreover, the widespread adoption of radiofrequency ablation techniques, owing to their various advantages, like reduced trauma, faster recovery times, and potentially shorter hospital stays compared to traditional surgical approaches, is further bolstering the market growth. Apart from this, the inflating demand for sclerotherapy, since it involves injecting a therapeutic solution directly into the tumor, causing it to shrink and eventually be absorbed by the body, is acting as another significant growth-inducing factor. Additionally, the emerging popularity of targeted therapies, which aim to block specific molecular markers or pathways that are involved in the tumor's development, is expected to drive the vascular tissue neoplasm market during the forecast period.

IMARC Group's new report provides an exhaustive analysis of the vascular tissue neoplasm market in the United States, EU5 (Germany, Spain, Italy, France, and United Kingdom) and Japan. This includes treatment practices, in-market, and pipeline drugs, share of individual therapies, market performance across the seven major markets, market performance of key companies and their drugs, etc. The report also provides the current and future patient pool across the seven major markets. According to the report the United States has the largest patient pool for vascular tissue neoplasm and also represents the largest market for its treatment. Furthermore, the current treatment practice/algorithm, market drivers, challenges, opportunities, reimbursement scenario and unmet medical needs, etc. have also been provided in the report. This report is a must-read for manufacturers, investors, business strategists, researchers, consultants, and all those who have any kind of stake or are planning to foray into the vascular tissue neoplasm market in any manner.

### Time Period of the Study

Base Year: 2023

Historical Period: 2018-2023

Market Forecast: 2024-2034

### Countries Covered

United States

Germany

France

United Kingdom

Italy

Spain

## Japan

### Analysis Covered Across Each Country

Historical, current, and future epidemiology scenario

Historical, current, and future performance of the vascular tissue neoplasm market

Historical, current, and future performance of various therapeutic categories in the market

Sales of various drugs across the vascular tissue neoplasm market

Reimbursement scenario in the market

In-market and pipeline drugs

Competitive Landscape:

This report also provides a detailed analysis of the current vascular tissue neoplasm marketed drugs and late-stage pipeline drugs.

### In-Market Drugs

Drug Overview

Mechanism of Action

Regulatory Status

Clinical Trial Results

Drug Uptake and Market Performance

### Late-Stage Pipeline Drugs

Drug Overview

Mechanism of Action

Regulatory Status

Clinical Trial Results

Drug Uptake and Market Performance

Key Questions Answered in this Report:

Market Insights

How has the vascular tissue neoplasm market performed so far and how will it perform in the coming years?

What are the markets shares of various therapeutic segments in 2023 and how are they expected to perform till 2034?

What was the country-wise size of the vascular tissue neoplasm market across the seven major markets in 2023 and what will it look like in 2034?

What is the growth rate of the vascular tissue neoplasm market across the seven major markets and what will be the expected growth over the next ten years?

What are the key unmet needs in the market?

### Epidemiology Insights

What is the number of prevalent cases (2018-2034) of vascular tissue neoplasm across the seven major markets?

What is the number of prevalent cases (2018-2034) of vascular tissue neoplasm by age across the seven major markets?

What is the number of prevalent cases (2018-2034) of vascular tissue neoplasm by gender across the seven major markets?

How many patients are diagnosed (2018-2034) with vascular tissue neoplasm across the seven major markets?

What is the size of the vascular tissue neoplasm patient pool (2018-2023) across the seven major markets?

What would be the forecasted patient pool (2024-2034) across the seven major markets?

What are the key factors driving the epidemiological trend of vascular tissue neoplasm?

What will be the growth rate of patients across the seven major markets?

### Vascular Tissue Neoplasm: Current Treatment Scenario, Marketed Drugs and Emerging Therapies

What are the current marketed drugs and what are their market performance?

What are the key pipeline drugs and how are they expected to perform in the coming years?

How safe are the current marketed drugs and what are their efficacies?

How safe are the late-stage pipeline drugs and what are their efficacies?

What are the current treatment guidelines for vascular tissue neoplasm drugs across the seven major markets?

Who are the key companies in the market and what are their market shares?

What are the key mergers and acquisitions, licensing activities, collaborations, etc. related to the vascular tissue neoplasm market?

What are the key regulatory events related to the vascular tissue neoplasm market?

What is the structure of clinical trial landscape by status related to the vascular tissue neoplasm market?

What is the structure of clinical trial landscape by phase related to the vascular tissue neoplasm market?

What is the structure of clinical trial landscape by route of administration related to the vascular tissue neoplasm market?
