Abstracts

The global vegan supplements market reached a value of US\$ 6.97 Billion in 2021. Looking forward, IMARC Group expects the market to reach a value of US\$ 10.88 Billion by 2027, exhibiting a CAGR of 7.50% during 2022-2027. Keeping in mind the uncertainties of COVID-19, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

Veganism is a practice that abstains from the use of animal byproducts, such as milk, eggs, or meat. Vegan supplements refer to additional nutrients that are derived from plant-based sources to fulfill the nutritional requirements of the human body. Generally consumed by the vegan population, they are rich in iron, calcium, vitamins B12 and D, iron, zinc, iodine, omega-3 fatty acids, and proteins. Vegan supplements are commonly available in pills, capsules, gummies, powders, tablets, and liquid forms. As compared to non-vegan supplements, they exhibit a smaller carbon footprint and are more environmentally sustainable while delivering the same dosage and quality of underlying nutrients. Apart from this, they help ensure the intake of proper nutrients, improve cognitive abilities, provide better athletic performance, manage weight, and boost immunity.

Vegan Supplements Market Trends:

The significant growth in the vegan population due to health concerns, environmental impact, and animal welfare is creating a positive outlook for the market. This is further supported by the increasing instances of various lifestyle diseases and the shifting consumer inclination toward a healthier lifestyle. Apart from this, continuous product innovations in various flavor profiles, such as vanilla, chocolate, berry, and others, are

providing an impetus to the market growth. Additionally, the increasing awareness about the associated benefits of vegan supplements and the rising demand for clean label, energy-rich offerings are positively impacting the market growth. Moreover, the extensive product application in sports nutrition as a good source of dietary fiber to minimize the risk of inflammation and improve cholesterol levels, blood viscosity, and arterial flexibility is acting as another growth-inducing factor. Besides this, the widespread adoption of vegan supplement powder with enhanced shelf life, rising expenditure capacities of consumers, and easy product availability across e-commerce platforms are anticipated to drive the market toward growth.
