Abstracts

The Vietnam aquaculture market size reached 5.1 Million Tons in 2023. Looking forward, IMARC Group expects the market to reach 6.9 Million Tons by 2032, exhibiting a growth rate (CAGR) of 3.3% during 2024-2032.

Vietnam is one of the most suitable places for the seafood industry, including both aquaculture and open ocean fishing with its coastline of 3,260 kilometres and an Economic Exclusion Zone of 1 million square kilometres. Currently, Vietnam is ranked as the fourth-largest producer of seafood from aquaculture behind China, Indonesia and India. Aquaculture systems are diversified according to different geographical and climatic conditions as one moves from the north, through central to the south of Vietnam.

Over the past few years, there has been an increasing consumption of fish in Vietnam. Some of the key factors driving the consumption of fish in Vietnam is their high nutritional value, their easiness to digest and the fact that they are more economical compared to other protein sources such as beef or pork. Moreover, consumers in Vietnam prefer fish in their diet as it's easy to cook, widely available, and adds variety to the daily diet. Some of the important seafood products include shrimp, pangasius, tuna and marine fish. Shrimp, currently represents the most important export product, and

accounted for around 50% of the total export turnover of the country.
