Abstracts

The Vietnam LED market reached a value of US\$ 236 Million in 2018. The report further anticipates the market to reach values worth US\$ 396 Million by 2024, representing a CAGR of 7.2% over the forecast period. Light-emitting diodes (LEDs) are semiconductor devices that generate non-coherent, narrow-spectrum light when forward voltage is applied. The first LED was an infrared-emitting device patented in 1961 and the first practical visible spectrum LED was developed in 1962. Currently, LEDs are incorporated into bulbs and fixtures for general lighting applications. A well designed LED lighting system has several advantages over the conventional lighting system using incandescent or florescent technologies such as better efficiency, durability, versatility, smaller in size, longer-lasting and environment-friendly. Another big advantage of using LED lighting system is that it does not radiate heat as in incandescent or florescent light bulbs. A heat sink, which is a passive device, draws away the heat from LEDs by absorbing it and dispersing it into the surrounding environment. This prevents LED products from getting overheated or burnt-out.

In Vietnam, LED technology was first introduced in traffic lights and the advertisement industry. The apparent advantages of the LED technology in lighting system have driven its use in several other sectors also. Across Vietnam, incandescent bulbs, especially in street lighting, are being replaced with LED bulbs. The Vietnamese government is vigorously endorsing the use of LED lighting through two major projects - Vietnam Energy Efficient Public Lighting Project (VEEPL) and Vietnam National Energy Efficiency Plan (VNEEP) – aiming to reduce energy consumption and carbon footprints. Driven by its numerous advantages over conventional lighting technologies, the market for LED lighting in Vietnam is witnessing robust growth and is expected to dominate the country's lighting industry in the coming years.

IMARC's latest study "Vietnam LED Market: Industry Trends, Share, Size, Growth, Opportunity and Forecast 2019-2024" provides a techno-commercial roadmap for setting up an LED manufacturing plant in Vietnam.
