Market Overview:

The Vietnam recycled plastics market size reached 248.5 Kilo Tons in 2022. Looking forward, IMARC Group expects the market to reach 409.9 Kilo Tons by 2028, exhibiting a growth rate (CAGR) of 8.36% during 2023-2028.

Plastic is present around us in huge quantities and accounts for almost 90% of the global municipal waste. This waste gets accumulated on land that can be used for other purposes, and thus recycling plastic offers an effective solution for clearing these landfill spaces. Plastic recycling includes the reprocessing of post-consumer or post-industrial plastics instead of the virgin resin. Plastic is also recycled during the manufacture of plastic products such as polyethylene films and bags. A significant fraction of these plastics is further used in the manufacturing of several products such as footwear, bags, toys, fabrics, toothbrushes, etc.

Increasing prices of conventional plastics along with the growing concern for the environment represent the key factors driving the market for recycled plastics in Vietnam. Recycling plastics reduces the amount of energy and natural resources needed to create virgin plastic. Therefore, shifting focus towards sustainability is boosting the demand for recycled plastics across the globe. Moreover, increasing local demand and lower labour costs has expanded the market in the country.
