### Market Overview:

The global wireless gigabit market size reached US\$ 2.7 Billion in 2022. Looking forward, IMARC Group expects the market to reach US\$ 7.0 Billion by 2028, exhibiting a growth rate (CAGR) of 17.2% during 2023-2028.

Wireless gigabit (WiGig) refers to an internet connection that offers a speed of 1 gigabit per second (Gbps) using millimeter wave (MMW), microwave, 4G/LTE, free-space optics (FSO) and carrier Wi-Fi technologies. It promotes faster speed for Blu-ray players, home theaters and other audiovisual equipment worldwide by operating in the frequency range of 60 GHz. It relies on beamforming technology for reducing congestion of networks and transmitting radio beams with a high-frequency bandwidth. It is widely employed in networking architecture as it provides accuracy and a high level of security while transferring the data.

### Wireless Gigabit Market Trends:

The growing demand for faster data transfer in information and technology (IT) and telecom sectors represents one of the major factors driving the market. Moreover, there is a rise in the utilization of consumer electronic devices, such as HD televisions, laptops, tablets, and smartphones, which is propelling the growth of the market. In addition, the increasing trend of bring your own device (BYOD) in several companies is resulting in the development of wireless endpoints that can handle high-speed data. This, in confluence with the escalating demand of gigabit IP data connectivity for long-term evolution (LTE) deployments, is contributing to the market growth. Apart from this, the rising adoption of small cell backhaul transmission to manage large volumes of data

traffic and improve network coverage of both outdoor and indoor spaces is stimulating the market growth. Furthermore, extensive research and development (R&D) activities by key players and the growing popularity of cloud storage solutions are strengthening the growth of the market. Some of the other growth-inducing factors are rapid digitization, rising penetration of the internet and the increasing integration of wireless chipsets in electronic devices.
