## **Abstracts**

The global wireless POS terminals market size reached US\$ 10.3 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 24.3 Billion by 2032, exhibiting a growth rate (CAGR) of 9.7% during 2024-2032.

A wireless POS terminal (Point of Sale) is a digital device employed to process card payments in banks, retail stores, museums, metro stations, pharmacies and restaurants. It is bifurcated into software and hardware solutions. The software solution consists of asset management, content management and configuration solutions. Whereas, the hardware category includes workstation, payment terminals like smartphones and tablets allied with credit or debit card readers, and accessories including monitors, barcode scanners, receipt printers and cash drawers. The POS process generally begins with the scanning of a user's information provided by their debit, credit or prepaid card. Following this, the terminal verifies whether the available amount is sufficient to complete the transaction from the user's bank account. The transaction takes place after confirmation and the terminal stores a note of the transfer and acknowledges it with a receipt.

Wireless POS Terminals Market Drivers:

The introduction of Personal Identification Number (PIN) and chip-embedded payment

cards have minimized security-related concerns, thereby creating a positive outlook for the global wireless POS terminals market. Moreover, the sales of POS terminals are being boosted by the increasing wireless connectivity coupled with the availability of peripheral devices, scanners, card readers, and printers. In addition to this, the affordable and portable nature of these terminals is a major advantage which helps in reducing the operation cost for retailers. Further, ultra-portable forms of these systems are being introduced by manufacturers. For instance, they have produced POS terminals with the size of a credit card. Apart from this, the number of people using their existing tablet/system as a POS terminal with the help of specialized software is rapidly increasing.
