Abstracts

The global wireless slate market size reached US\$ 208.0 Million in 2022. Looking forward, IMARC Group expects the market to reach US\$ 295.0 Million by 2028, exhibiting a growth rate (CAGR) of 6.0% during 2022-2028.

A wireless slate is a flexible and portable peripheral device used to control a computer that is connected to an interactive whiteboard (IWB). It has a touch-sensitive surface and an attached stylus pen that enables users to access files, write in digital ink and operate on-screen learning applications from anywhere in the room. Consequently, it is utilized in educational institutions to enhance teaching methodologies and facilitate collaborative learning. Other than this, it also finds applications in corporate board rooms, sports training rooms and broadcasting studios.

The increasing investments in IT infrastructure and the widespread adoption of advanced technologies across various organizations are among the key factors bolstering the global wireless slate market growth. Moreover, several educational institutions are replacing conventional teaching boards with interactive classrooms that are equipped with advanced hardware, such as IWBs, personal computers (PCs), document cameras and projector screens, to impart knowledge effectively. This acts as another growth-inducing factor, which is increasing the sales of wireless slates worldwide. Apart from this, key players are introducing smart slates and offering customized solutions to cater to the diversified demands of different consumers.

Key Market Segmentation:

IMARC Group provides an analysis of the key trends in each sub-segment of the global wireless slate market report, along with forecasts at the global, regional and country level from 2023-2028. Our report has categorized the market based on deployment type

and application.
