Abstracts

The global X-band radar market size reached US\$ 5.9 Billion in 2023. Looking forward, IMARC Group expects the market to reach US\$ 7.8 Billion by 2032, exhibiting a growth rate (CAGR) of 3.1% during 2024-2032.

X-band is a class of radio waves that generally fall between the frequency range of 8ghz to 12ghz. X-band radar systems operate in this frequency range and are primarily used in maritime navigation for military and civil applications. X-band radars are installed on most large-sized research vessels, along with several offshore systems. Initially, these radars were developed for ship traffic navigation and control. Over the past decades, however, non-coherent X-band and S-band marine radars have been used in the monitoring of traffic and navigation of ships in coastal areas. The addition of certain software and hardware components have further enabled the utilization of these radars for measuring currents and waves. They are also being used by governments, academia and other industries for supporting offshore platform operations, monitoring oil spills and studying air-sea interactions.

At present, numerous investments across the globe are being made for the development of innovative weather detection radars. The advanced X-band Weather Radar is one such innovation which was recently launched by the Finland-based

weather, environmental, and industrial measurement company, Vaisala Oyj. It offers more accurate precipitation measurement and improved data for flood warnings for hydro-electric power plants. Apart from this, the frequency band is also used in airborne or spaceborne imaging radars based on the synthetic aperture radar (SAR). For instance, in May 2019, the Indian Space Research Organization (ISRO) launched the Radar Imaging Satellite 2B, or RISAT 2B, an all-weather imaging satellite, which is fitted with an X-band SAR. The radar will help in providing minute details about the size of objects present on the earth, structures and movement, to complement the data collected through standard optical remote-sensing satellites.
