### ABOUT DOCUMENT MANAGEMENT SYSTEM

Document management systems (DMS) enable organizations to manage tasks effectively and streamline processing of their documents across all departments. From unstructured content to structured documentation, DMS includes every action taken with respect to creation, distribution, and deletion of documents. It helps centralise unorganized documents. Unorganized content makes it difficult for large organizations to use the available data and extract business related information. DMS manages the consistency of documents and protects documents from unauthorised use.

Technavio's analysts forecast the global document management systems market to grow at a CAGR of 14.28% over the period 2014-2019.
