## **Abstracts**

The omnidirectional camera systems that make up the 360-degree cameras continuously record a view in all directions. A 360-degree view can be captured by these cameras, improving the visual flow. This camera is a tool that records a 360-degree field's horizontal surface view. It is able to reach an extra-high resolution and high zoom level because to its outstanding image quality. As virtual and augmented reality proliferate in video games and other interactive entertainment, 360-degree cameras are growing in popularity. Usually, a single camera or a system with multiple lenses is used to capture these videos. The film business is the main application for these camera sets.

These rigs are quite robust in a range of shooting conditions and rather simple to use. These cameras are ideal for a wide range of uses, such as video surveillance at train and metro stations, airport terminals, city surveillance installations like public square monitoring, industrial and critical infrastructure security, university campuses and school halls, and shopping mall security in both indoor and outdoor spaces, including parking lots. These cameras are simpler to use and maintain than DSLR models. This camera requires more power to generate heat than other cameras do. They have energy-saving chips fitted as a result.

Similar to digital single-lens reflex (DSLR), action, and mirrorless cameras, the wireless

360-degree camera may connect to smartphones by Wi-Fi or Bluetooth, facilitating quicker and easier editing, transferring, post-processing, and social network publication. Furthermore, due of their durability and capacity to record a wider frame, 360-degree cameras are a favourite among vloggers and enthusiasts of extreme sports. The need for better photography solutions is another major factor driving expansion, as 360-degree cameras are particularly good at producing high-resolution images, especially in low light, making them appropriate for professional use. The market for 360-degree cameras has room to grow due to the cost-effectiveness of 360-degree panoramic cameras.

The rising popularity of virtual and augmented reality in video games and other interactive entertainment throughout the globe has led to a rapid increase in the use of 360-degree cameras. 360-Degree Camera Market expansion is being driven by the growing popularity of immersive advertisements that showcase a product, store, or property. These advertisements help businesses establish a unique brand identity, especially on social media sites like Facebook, Instagram, and YouTube. 360-degree cameras are employed in robotics for visual odometry, feature matching and selection, and simultaneous localization and mapping challenges. In addition, the growing prevalence of these cameras in different cars helps drivers by giving them a better understanding of their environment.

The demand for 360-degree cameras is being driven by the integration of these cameras with mobile devices and the growing desire to watch real-time 4K and HDR video. In addition, rising instances of theft and burglary in residential complexes, public spaces, and businesses, together with security lapses, are driving up product sales. These cameras are also used by the defence industry for monitoring and surveillance purposes. A primary factor contributing to their low acceptance rate is the general public's ignorance of 360-degree cameras. The 360-degree camera rigs are too big to photograph little subjects or models up close.

Based on resolution, distribution channel, connectivity type, camera type, vertical, and geography, the global 360-degree camera market is divided into segments.

The market is divided into High-Definition (HD) and Ultra-High-Definition (UHD) categories based on resolution. TVs with ultra-high definition have the largest market share. Ultra-high definition has a greater resolution, clearer sight, and superior picture quality as compared to High definition. Because of these advantages over others, this market segment eventually becomes dominant. The sharpness of the picture, the sharp visibility, and the Ultra HD quality are what are driving this market forward.

The market is segmented into single-brand, multi-brand, and online stores based on the distribution channel. The distribution channel with the highest frequency is single-brand retailers. In terms of sales volume, the multi-brand store led the global 360-degree camera market in the distribution category. This market is growing as a result of the availability of multiple brands in one location. Retail establishments offering goods and services from multiple brands in one handy location are known as multi-brand stores. A customer can visit a store, peruse the inventory, weigh the features, prices, and specifications of multiple models and brands, and then decide which one best suits their needs.

The market is split between Wired Camera and Wireless Camera based on Connectivity Type. Wired 360-degree cameras are anticipated to hold a leading market position during the projection period. 360-degree wired cameras can be very handy when there are limitations on movement. Among other areas, you can find the great majority of these cameras in retail, residential, and commercial settings. Because these devices offer greater convenience, there is also a growing daily demand for wireless 360-degree cameras. 360-degree wireless cameras allow you to record both live environments and whole outdoor sporting events. 360-degree wireless cameras are more versatile and mobile than wired cameras in nearly all circumstances.

This report illustrates the most vital attributes of the 360-Degree Camera Market, which are driving and providing opportunities.

This research gives an in-depth analysis of the 360-Degree Camera Market growth on the basis of several segments in the market.

This report presents the predictions of the past and present trends of the 360-Degree Camera Market.

This study also presents the competitive analysis, such as key strategies and capabilities of major players of the 360-Degree Camera Market.

## Contents

### **1. EXECUTIVE SUMMARY**

### **2. INDUSTRY OUTLOOK**

2.1. Industry Overview

2.2. Industry Trends

### **3. MARKET SNAPSHOT**

3.1. Market Definition

3.2. Market Outlook

3.2.1. Porter Five Forces

3.3. Related Markets

### **4. MARKET CHARACTERISTICS**

4.1. Market Overview

4.2. Market Segmentation

4.3. Market Dynamics

4.3.1. Drivers

4.3.2. Restraints

4.3.3. Opportunities

4.4. DRO - Impact Analysis

### **5. CONNECTIVITY TYPE: MARKET SIZE & ANALYSIS**

5.1. Overview

5.2. Wired

5.3. Wireless

### **6. RESOLUTION: MARKET SIZE & ANALYSIS**

6.1. Overview

6.2. HD

6.3. UHD

## **7. CAMERA TYPE: MARKET SIZE & ANALYSIS**

- 7.1. Overview
- 7.2. Single
- 7.3. Professional

## **8. CAMERA TYPE: MARKET SIZE & ANALYSIS**

- 8.1. Overview
- 8.2. Media & Entertainment
- 8.3. Consumer
- 8.4. Military & Defense
- 8.5. Travel & Tourism
- 8.6. Automotive
- 8.7. Commercial
- 8.8. Healthcare
- 8.9. Others

## **9. GEOGRAPHY: MARKET SIZE & ANALYSIS**

- 9.1. Overview
- 9.2. North America (U.S., Mexico, Canada)
- 9.3. Europe (France, Germany, UK, Italy, Netherlands, Spain, Russia, Rest of Europe)
- 9.4. Asia Pacific (Japan, China, India, Australia, South East Asia, Rest of APAC)
- 9.5. Latin America (Brazil, Argentina)
- 9.6. Middle East & Africa (Saudi Arabia, UAE, South Africa, Rest of Middle East and Africa)

## **10. COMPETITIVE LANDSCAPE**

- 10.1. Competitor Comparison Analysis
- 10.2. Market Developments
  - 10.2.1. Mergers and Acquisitions, Legal, Awards, Partnerships
  - 10.2.2. Product Launches and execution

## **11. VENDOR PROFILES**

- 11.1. Samsung Electronics (South Korea)
  - 11.1.1. Overview

- 11.1.2. Financial Overview
- 11.1.3. Product Offerings
