## **Abstracts**

In the Internet of Things era, 5G network technology allows IoT devices to increase their performance and dependability. The introduction of a 5G-enabled Internet of Things aims to extend sensor-based Internet of Things capabilities to actuators, robots, and drones for dispersed coordination and low latency reliable job execution in hands. Furthermore, the ability to connect with other IoT devices, smartphones and tablets, computer programmes, and other devices is vital to the Internet of Things' commercial success.

In the era of 5G network technology, Internet of Things technologies such as machine-to-machine interactions with intelligent data analytics are significantly transforming the landscape of numerous sectors. Furthermore, the worldwide 5G IoT market is seeing a spike as a result of an increase in high-speed network supply, allowing IoT devices to connect and share data more quickly, which is expected to fuel 5G IoT market growth in the future years.
