Abstracts

Cancer immunotherapy medications are intended to enhance or augment the body's natural immune response to combat cancer. This market is research-driven, with a significant reliance on the identification of compounds capable of eliciting an immune response against diverse indications.

On the basis of product, the cancer immunotherapy market has been divided into monoclonal antibodies, immunomodulators, vaccines, and check point inhibitors. The check point inhibitors market is expected to grow at the fastest rate. The benefits provided by this medicinal medicine are responsible for the rapid expansion.

The worldwide cancer immunotherapy market is divided into several applications, including lung cancer, breast cancer, colorectal cancer, prostate cancer, multiple myeloma, melanoma, head and neck cancer, and others. The worldwide cancer immunotherapy market is expected to be dominated by lung cancer. The lung cancer category was predicted to have the highest share in the next five years as the number of people suffering from lung illnesses increased.
