Abstracts

Over the past ten years, the idea of a 'smart factory' has been increasingly significant in the business. Automated factories with sophisticated technology enabling humans, machines, and processes to work together to ensure optimal and efficient production are known as smart factories. A smart factory's distinct features, like computer-aided automation, integrated workflow control, safety, energy optimisation, and operational speed, set it apart from conventional industrial production plants. Utilising a smart factory can result in increased productivity, better efficiency, and lower operating costs, among other benefits. The study's objective is to examine the market's segments in terms of the factors that are driving, limiting, providing opportunities, and posing difficulties for the smart factory industry. The study endeavour is intended to concentrate on offering thorough data about the market and its stakeholders.

Primary research is a crucial part of the study since it gives the researchers detailed, first-hand knowledge about the Cloud Gaming Market. The research focuses on both desk research and primary research based on interviews in order to precisely assess and gather relevant data linked to the Cloud Gaming Market.

Mostly quantitative methods are used in data analysis to get trustworthy results from a variety of datasets. We shall examine regular market research studies to comprehend industry-specific data and growth patterns. In order to simulate the precise market size

in terms of value and volume, market forecasting methodologies will also be used.

In order to methodically evaluate the data and information gathered from primary and secondary research, the report's findings are analysed through a thorough market assessment. The research presents the industry insights, driven by different regions and nations, with an emphasis on major market players, production and sales outlooks, and technological development outlooks.

Turkey

Saudi Arabia

South Africa

Rest of Middle East & Africa

The market is divided into four segments based on the type of device: smartphones, tablets, laptops, PCs, smart TVs, and consoles. Over the course of the forecast period, the personal computer and laptop/tablet segments are anticipated to lead the market. The availability of high-end computers and the early adoption of gaming laptops and PCs are promoting the uptake of creative games.

On the other hand, there will probably be more opportunities for gaming on smartphones and smart TVs due to the growing availability of inexpensive internet subscriptions and developments in 5G technology. The potential of cloud-based gaming solutions is anticipated to increase with the increasing use of smartphones. The smartphone and smart TV markets are therefore anticipated to grow quickly throughout the course of the projected period.

The market is divided into two segments based on the type of streaming: file streaming and video streaming. Because it may download a small part of the file, the file streaming segment is anticipated to lead the market. Consequently, players contribute game file patches and help the developer reduce the expense of creating media content.

Since video streaming may be played on any device without the need for technology, it is anticipated to grow at a quick rate throughout the course of the cloud gaming forecast period. Also, it has greatly reduced cloud gamers' latency problems. Moreover, a number of players enable video games, including LiquidSky, Shadow, GeForce Now, and others.

The market is divided into three categories of end-users: casual, enthusiastic, and hardcore gamers. Over the projected period, there will be a sharp increase in the hardcore gamers category due to increased investment in innovative and cutting-edge gaming solutions. Companies in the market are spending a lot of money on rich media content in order to offer top-notch streaming games on gadgets like smartphones, laptops, and smart TVs. The usage of cloud-based gaming solutions is predicted to rise among die-hard gamers, which will further propel the market's expansion in the near future.

Over the anticipated term, the market is predicted to be led by the casual gaming segment. The market for casual gaming is anticipated to grow as a result of cellphones being more widely available and internet services becoming more efficient. In a similar vein, 5G and inexpensive cloud-based technologies will encourage gaming among the group of serious gamers.

This market is divided geographically into five main areas: Europe, Asia Pacific, North America, Middle East & Africa, and Latin America. They are divided into other categories by nation.

It's expected that North America will increase its market share significantly. The anticipated factors driving market expansion in North America are the early adoption of cloud computing, the increase in online gaming demand, and the broad availability of effective internet infrastructure.

It is anticipated that Europe's growing gaming industry will benefit the cloud gaming industry in the area. This growth drives the significant cooperation, funding, and acquisition in the European gaming industry. For example, the European Commission authorised Microsoft Corporation's purchase of ZeniMax Media, a publisher and producer of video games, in March 2021.

This report illustrates the most vital attributes of the Cloud Gaming Market, which are driving and providing opportunities.

This research gives an in-depth analysis of the Cloud Gaming Market growth on the basis of several segments in the market.

This report presents the predictions of the past and present trends of the Cloud Gaming Market.

This study also presents the competitive analysis, such as key strategies and capabilities of major players of the Cloud Gaming Market.

Contents

1. EXECUTIVE SUMMARY

2. INDUSTRY OUTLOOK

2.1. Industry Overview

2.2. Industry Trends

3. MARKET SNAPSHOT

3.1. Market Definition

3.2. Market Outlook

3.2.1. Porter Five Forces

3.3. Related Markets

4. MARKET CHARACTERISTICS

4.1. Market Overview
