Abstracts

Over the past few years, there is a drastic increase in the volume of data due to increasing adoption of digital technology, big data, and advanced technologies in all the industries. The enterprises are aggressively moving towards adoption of analytics techniques to analyse structured and unstructured data and get the valuable insights to make better decisions. The descriptive analytics provides valuable information about the past business failure or success. These insights help the business to make better business plans and make success in the future business. The descriptive analytics tools are being widely adopted in all the industry sectors and are the primary elements in analytics tree.

The increasing adoption of digital technologies, the need of analytics, increasing return on investments (ROI), and a huge amount of data creation have led the organizations to adopt descriptive analytics. The descriptive analytics market is expected to grow at a CAGR of 18.2% during the period 2016–2022.
