## **Abstracts**

In the 1990s, scientists at various American organizations, notably NASA and the Jet Propulsion Laboratory, conceived and developed the direct methanol fuel cell (DMFC), a relatively new member to the fuel cell family. Over several decades of study, particularly from 2010 onwards, numerous high-tech corporations, including NEC and UltraCell, have committed significant resources to research and development of DMFCs, and they have all displayed prototypes of their own DMFCs. However, as of right now, just two businesses concentrate on commercial productions. The DMFC market with full-time commercial production participants is the sole market studied in this report. Because of their high fuel density, quick refueling, and ability to refuel while operating, DMFCs are among the most popular fuel cell technologies for use as a generator and production device in small portable applications.

Furthermore, methanol is used in DMFCs instead of hydrogen gas as a fuel since it is denser and has a higher energy density, which results in far greater performance. In addition, there are plenty of gasoline carts with different filling sizes and quantities of methanol available as liquid fuel, allowing users or customers to acquire the exact amount they need. Additionally, the DMFC's tiny design reduces both its weight and size, making it easy to travel and safe to use anywhere.

Research Methodology:

After secondary research provided a fundamental understanding of the worldwide Direct Methanol Fuel Cells Market scenario, extensive primary research was carried out. A number of primary interviews were carried out with industry experts from the supply and demand sides, including C- and D-level executives, product managers, and marketing and sales managers of major manufacturers, distributors, and channel partners from tier 1 and tier 2 companies offering Direct Methanol Fuel Cells Market, as well as personnel from academia, research, and CROs. These interviews were conducted across five major regions: North America, Europe, Asia Pacific, and the Rest of the World (Latin America & the Middle East & Africa). Participants from the supply-side and demand-side participated in about 70% and 30% of the primary interviews, respectively. Through the use of questionnaires, emails, online surveys, in-person interviews, and phone interviews, this main data was gathered. The primary participants share is given below:

The segmentation coverage of the study is provided below.

Direct Methanol Fuel Cells Market based on Component:

bipolar plates

current collectors

catalysts

membranes

Direct Methanol Fuel Cells Market based on Application:

Portable

Stationary

Transportation

Direct Methanol Fuel Cells Market based on Geography:

North America

US

Canada

Europe

Germany

UK

France

Italy

Spain

Rest of Europe (RoE)

Asia Pacific (APAC)

China

Japan

India

Australia

South Korea

Rest of Asia Pacific (RoAPAC)

Latin America (LATAM)

Brazil

Argentina

Rest of South America

Middle East and Africa (MEA)

UAE

Turkey

Saudi Arabia

South Africa

Rest of Middle East & Africa

Membranes, bipolar plates, current collectors, and catalysts are included in the component-based market segmentation of direct methanol fuel cells. The market share of direct methanol fuel cells is dominated by the bipolar companies. The bipolar plates play a crucial role in the system because they allow for the regulation of heat and water within the cell and conduct current between the cells. Furthermore, because of their low field patterns, the bipolar plates improve the mass transmission at larger current densities. One of the key components of a fuel cell is the catalyst, which affects the overall system cost during large-scale production. Catalyst production may be scaled up to reduce waste and increase yield while also benefiting the environment and economy. The cost of the fuel cell stack is also determined by another important component, such as the membrane. Surface treatments are performed using the membrane component. Increasing research efforts on fuel cell membrane components are expected to play a major role in the forecast period. These efforts are focused on improving the membranes, especially on thinner and lower PFSA ratio versions of the current membranes.

The portable, stationary, and transportation segments of the direct methanol fuel cell market are divided based on application. Because of its high energy density, ease of use, portability, simplicity, and quick and simple recharging, dry cell batteries (DMFCs) are the most practical choice for portable applications. A further benefit is that these fuel cells' higher energy density than rechargeable batteries allows them to meet consumer demand for longer talk times. Additional benefits, such as possible recharging, also position this as a highly significant advance in the market for portable electronics.

Most of the applications in the transport sector are still in the development stage. Long-term transportation benefits greatly from the possibility of liquid storage on board due to the lower operating temperature of menthol/DMFC. As a result, from 2021 to 2030, the transportation category will grow at a compound annual growth rate (CAGR) of 14.26%. Furthermore, this is employed to the commercial, industrial, and residential sectors in stationary applications to effectively generate electricity.

This report illustrates the most vital attributes of the Direct Methanol Fuel Cells Market, which are driving and providing opportunities.

This research gives an in-depth analysis of the Direct Methanol Fuel Cells Market growth on the basis of several segments in the market.

This report presents the predictions of the past and present trends of the Direct Methanol Fuel Cells Market.

This study also presents the competitive analysis, such as key strategies and capabilities of major players of the Direct Methanol Fuel Cells Market.

## Contents

### 1. EXECUTIVE SUMMARY

### 2. INDUSTRY OUTLOOK

2.1. Industry Overview

2.2. Industry Trends

### 3. MARKET SNAPSHOT

3.1. Market Definition

3.2. Market Outlook

3.2.1. Porter Five Forces

3.3. Related Markets

### 4. MARKET CHARACTERISTICS

4.1. Market Overview

4.2. Market Segmentation

4.3. Market Dynamics

4.3.1. Drivers

4.3.2. Restraints

4.3.3. Opportunities

4.4. DRO - Impact Analysis

### 5. COMPONENT: MARKET SIZE & ANALYSIS

5.1. Overview

5.2. Bipolar plates

5.3. Current collectors

5.4. Catalysts

5.5. Membranes

5.6. Others

### 6. APPLICATION: MARKET SIZE & ANALYSIS

6.1. Overview

6.2. Portable

- 6.3. Stationary
- 6.4. Transportation
- 6.5. Others

## **7. GEOGRAPHY: MARKET SIZE & ANALYSIS**

- 7.1. Overview
- 7.2. North America (U.S., Mexico, Canada)
- 7.3. Europe (France, Germany, UK, Italy, Netherlands, Spain, Russia, Rest of Europe)
- 7.4. Asia Pacific (Japan, China, India, Australia, South East Asia, Rest of APAC)
- 7.5. Latin America (Brazil, Argentina)
- 7.6. Middle East & Africa (Saudi Arabia, UAE, South Africa, Rest of Middle East and Africa)

## **8. COMPETITIVE LANDSCAPE**

- 8.1. Competitor Comparison Analysis
- 8.2. Market Developments
  - 8.2.1. Mergers and Acquisitions, Legal, Awards, Partnerships
  - 8.2.2. Product Launches and execution

## **9. VENDOR PROFILES**

- 9.1. SFS ENERGY AG
  - 9.1.1. Overview
  - 9.1.2. Financial Overview
  - 9.1.3. Product Offerings
  - 9.1.4. Developments
