## **Abstracts**

The market for geomembranes is fueled by factors like the rising use of geosynthetics in emerging nations like APAC and LAMEA. The need for geomembrane has also grown as a result of rising waste management issues. However, one of the main restraints on the growth of the geomembrane market is the fluctuation in raw material costs.

Contrarily, it is anticipated that throughout the projection period, the geomembrane market would present attractive prospects due to rising infrastructure investment and increased awareness of water management.

On the basis of raw material, technology, application, and geography, the geomembrane market is divided into subgroups. High density polyethylene (HDPE), low density polyethylene (LDPE), ethylene propylene diene monomer (EPDM), polyvinyl chloride (PVC), polypropylene (PP), and other materials make up the geomembrane market's raw material segmentation. It is separated into extrusion, calendering, and other categories based on technique. The geomembrane market is investigated across many applications, including water management, waste management, mining, tunnel linings, and civil engineering. The geomembrane market is examined in terms of each

region: North America, Europe, Asia-Pacific, and LAMEA. All regions and market segments' geomembrane market shares are examined.
