Abstracts

For efficient treatment and management, diseases such as TB, HIV/AIDS, hepatitis, sexually transmitted infections, and respiratory infections require an accurate and prompt diagnosis. Early detection of these disorders is critical in the surveillance of these infectious diseases, boosting market growth in this field.

Inadequate reimbursements are a key problem impeding industry expansion. Medical testing has suffered a 40% decrease in reimbursement over the previous 40 years, according to MedPAC (Medicare Payment Advisory Commission). This reduction, as well as extra economic concerns among healthcare organisations, are significant impediments to the use of innovative diagnostic procedures in clinical laboratories.
